TotalRecalls Welcome Email Sequence

Email Sequence

Email 1: Welcome

Subject:Your AI chats are about to get a permanent home

Preheader:Here's how to download your first conversation in minutes.

Hi there,

Thanks for trying TotalRecalls. Right now, every conversation you've had with ChatGPT, Claude, or Perplexity is sitting on someone else's server — one UI change or expired session away from disappearing.

Your free tier is ready to go: connect a provider, choose a conversation, and watch it land as a Markdown file in a folder on your own PC. No account. No cloud. Just your files, on your machine.

[Download my first conversation]

AI Providers Consolidation Email

Email 2: Feature Spotlight

Subject:One app. Eight AI providers. Zero cloud.

Preheader:See why keeping one local library beats juggling eight tabs.

Most people don't use just one AI assistant anymore. You might draft in ChatGPT, research in Perplexity, and code with Claude — which means your best thinking is scattered across accounts you don't fully control.

TotalRecalls pulls all of it — ChatGPT, Claude, Gemini, Grok, Perplexity, DeepSeek, Mistral, and Qwen — into a single local folder. Every conversation becomes a searchable, portable Markdown or JSON file. Move it to a new laptop and it just works. No login required.

[See how it works]

Data Ownership Email Campaign

Email 3: Ownership

Subject:Files you own beat an account you rent

Preheader:No subscription. No lock-in. Just your data, on your drive.

Here's the thing about cloud-based chat history: it's only yours until the provider decides otherwise. A pricing change, a policy update, a shut-down feature — and your archive goes with it.

TotalRecalls flips that. Every conversation you download becomes a plain file on your own computer, forever. Copy it, back it up, open it in any editor. Nobody can take it away, because nobody else is holding it.

[Start building your library]

TotalRecalls Pro Upgrade Email

Email 4: Upgrade Offer

Subject:Unlock all 8 providers for \$24 — once

Preheader:No subscription. No renewal. Just full access, forever.

You've seen how TotalRecalls works on the free tier. Ready for the full library?

Upgrading to Pro unlocks all eight providers and unlimited downloads for a one-time \$24 payment — the discounted launch price. No subscription, no recurring charge, and free updates to the app for life.

[Buy TotalRecalls — \$24 USD]

AI Conversations Deserve Permanent Home

Blog Post

Why Your AI Conversations Deserve a Permanent Home

Somewhere on a server you don't control, there's a version of you that's had thousands of conversations. You've asked ChatGPT to debug your code, had Claude draft a contract, sent Perplexity down a research rabbit hole, and let Gemini summarize a stack of PDFs. Every one of those exchanges represents real time and real thinking — and almost none of it is actually yours to keep.

That's not a hypothetical risk. It's how these platforms are built.

The Quiet Fragility of Chat History

AI providers don't design their products around long-term archiving. They're optimized for the next conversation, not the one from six months ago. Which means your history is exposed to a handful of everyday failures:

UI redesigns that reorganize or hide old threads

Session expirations that quietly end a research trail

Download failures on export tools that were never built to be reliable

Takeout dumps — like Google's — that arrive as unreadable, unstructured archives

Closed tabs that take a half-finished debugging session with them

None of these require a data breach or an outage. They're just the ordinary friction of using cloud software, and they add up. Ask anyone who's tried to find a six-month-old ChatGPT conversation and watched the search come back empty.

Why "It's in the Cloud" Isn't the Same as "It's Safe"

There's a comforting assumption that if something lives in the cloud, it's backed up and permanent. In practice, the opposite is often true. Cloud-hosted chat history exists at the discretion of the provider — subject to their retention policies, their infrastructure choices, and their product roadmap. You don't own the file. You have access to a view of it, for as long as the provider decides to keep offering that view.

If you use one AI assistant, that's a manageable risk. If you use several — which is increasingly the norm — the risk multiplies. Your most valuable thinking is spread across separate accounts, each with its own quirks, its own export limitations, and its own timeline for change.

What Ownership Actually Looks Like

Real ownership means the conversation lives on a device you control, in a format you can open without anyone's permission. That's the entire premise behind TotalRecalls, a Windows desktop app built to solve exactly this problem.

TotalRecalls connects to eight major AI providers — ChatGPT, Claude, Perplexity, Gemini, Grok, DeepSeek, Mistral, and Qwen — and downloads your conversations directly to a folder on your own PC. Each conversation is saved as a plain Markdown file (with a companion JSON file for structured data), which means:

You can open it in any text editor, not just a proprietary viewer

You can search it, back it up, or move it to another machine without a login

It doesn't disappear if a provider changes its export policy tomorrow

Nothing gets uploaded anywhere in the process. The app runs entirely locally — your conversations never leave your machine, and there's no account to create in order to use it.

One App, Instead of Eight Different Habits

The other problem TotalRecalls solves is more practical than existential: keeping track of eight different export processes is exhausting. Each provider handles data downloads differently —

Gemini requires parsing a Google Takeout archive, Perplexity's research threads expire, and Grok conversations reference X posts that complicate a clean export.

TotalRecalls standardizes all of it. Pick a provider, connect your account locally, choose a destination folder, and download. The result is a single library — organized by provider, searchable, and consistent — instead of eight scattered habits you have to remember to maintain.

What It Costs (and What It Doesn't)

TotalRecalls is available as a free tier that works with three providers — ChatGPT, Claude, and Perplexity — and allows up to five conversation downloads per session. It's enough to test the workflow on your own real conversations before committing to anything.

The Pro version unlocks all eight providers and unlimited downloads for a one-time payment of \$24 USD, a discounted launch price. There's no subscription, no recurring billing, and no renewal to remember. You pay once, and the core app keeps receiving free updates for the life of the product.

Start Before You Lose Something You Can't Get Back

The best time to back up a conversation is before you need it, not after a session expires or a thread disappears. If you've ever tried to relocate a research trail, a piece of code, or a draft that lived only inside an AI chat window, you already know how that story usually ends.

TotalRecalls turns that risk into a five-minute habit: connect a provider, choose a folder, download. What comes out the other end isn't a cloud dependency — it's a file, on your machine, that belongs to you for as long as you want to keep it.

[Try the free tier today, or buy TotalRecalls for a one-time \$24.]

Stop Losing AI Chats Facebook Ad

Ad variation 2

Primary text

Ever tried getting your old conversations back from ChatGPT or Claude? Good luck.

Providers make it frustrating, slow, or flat-out impossible to retrieve chats once they're buried or expired. TotalRecalls solves that — one app, 8 providers, and your conversations saved locally as files you actually own.

Headline

TotalRecalls Launch Marketing Plan (Revised)

Overview

TotalRecalls is a Windows desktop app that lets users download their entire AI chat history — from ChatGPT, Claude, Perplexity, Gemini, Grok, DeepSeek, Mistral, and Qwen — into a private, local folder as Markdown and JSON files. No cloud, no subscription, no account. This revised plan expands the original channel mix (Search, Meta, X, LinkedIn, Email, Blog, Organic Social) to formally include YouTube, TikTok, and Instagram, reflecting the growing role of short-form video in driving both awareness and trust for the launch.

Objectives

Drive Pro license purchases at the discounted launch price of \$24 USD (one-time, no subscription)

Build category awareness around the risk of losing AI conversation history

Establish TotalRecalls as the trustworthy, privacy-first solution among AI power users

Convert free-tier trials (3 providers, 5 conversations/download) into Pro upgrades

Generate founder-led social proof to build early credibility

Target Audience

Knowledge workers, developers, researchers, and writers who rely on multiple AI assistants daily

Privacy-conscious users wary of cloud storage and vendor lock-in

Power users who have already lost a valuable conversation to a UI change, session expiry, or platform migration

Windows 10/11 users (primary); note that mobile platform audiences must be guided to desktop for install

Key Messages

Loss aversion:"You back up your files. Why not your AI conversations?"

Urgency:"Protect your conversations while you can."

Provider friction:"Trying to get your conversations back from AI providers? Good luck."

Founder authenticity:"This product came from my own inability to get my AI conversations back from the big providers."

Value/pricing:One-time \$24 USD launch price (50% off), no subscription, lifetime license, free tier available to try first.

Channel Mix & Roles

Channel	Role	Content Focus
---------	------	---------------

Search	Capture high-intent demand	"Export ChatGPT history," "backup Claude conversations," provider-specific guides
Meta (Facebook/Instagram Feed)	Retargeting + conversion	Product demos, testimonials, pricing offer
Instagram Reels	Awareness + demo	Short-form product demos, loss-aversion hooks
TikTok	Awareness + founder-led storytelling	Founder story, problem-awareness hooks, native-feeling short videos
YouTube (long-form)	Proof, education, trust, SEO	Full product walkthroughs, provider-specific tutorials, founder interviews
YouTube Shorts	Awareness + demo	Repurposed short-form hooks, quick demos
X	Community + real-time engagement	Threads on data ownership, founder commentary
LinkedIn	Founder credibility + B2B knowledge workers	Founder story, professional use cases
Email	Nurture + conversion	Free tier onboarding, upgrade prompts, urgency reminders
Blog	SEO + education	Provider-specific export guides, "own your AI data" thought leadership
Organic Social	Community amplification	Repurposed video content, user testimonials

Short-Form Video Strategy Framework

Short-Form Video Strategy

Content Pillars

Loss Aversion — You already back up your files; your AI conversations deserve the same protection.

Provider Friction — AI providers make it hard (or impossible) to reliably get your own conversations back.

Founder Authenticity — This product exists because the founder lived the problem himself.

Urgency — Every day without a backup is a day you risk losing months of work.

Proof & Education — Real demos showing exactly how the app works, provider by provider.

Channel Roles Mapped to Funnel Stages

Channel

Funnel Stage

Purpose

TikTok

Top-of-funnel (Awareness)

Founder-led hooks, problem awareness, native short-form storytelling

Instagram Reels

Top-to-mid funnel (Awareness/Consideration)

Demos, loss-aversion hooks, urgency ads

YouTube Shorts

Top-to-mid funnel (Awareness/Consideration)

Repurposed hooks, quick demos, discovery via Shorts feed

YouTube (long-form)

Mid-to-bottom funnel (Consideration/Conversion)

Full walkthroughs, proof, SEO-driven education, trust-building

Note on mobile CTAs: Since TikTok and Instagram are mobile-first but TotalRecalls is a Windows desktop app, every script's CTA directs viewers to "link in bio" or "totalrecalls.app" for use on their computer — never to an app store. Copy should explicitly reference "on your PC" or "on your Windows computer" so expectations are set correctly.

Posting Cadence

Platform

Platform	Cadence
TikTok	4–5x/week during launch (Weeks 1–4), then 2–3x/week
Instagram Reels	3–4x/week during launch, then 2x/week
YouTube Shorts	3x/week, repurposing TikTok/Reels content
YouTube (long-form)	1x/week (walkthroughs, provider guides, founder interview)

Video Scripts

1. Main Product Explainer (45–90 sec)

Platforms: YouTube, Instagram Reels, Meta

Goal: Educate and convert — show the full value proposition.

[0:00–0:05] Hook

Visual: Fast montage of chat windows glitching, sessions expiring, "thread not found" errors.

VO: "Every day, people lose months of AI conversations — and never get them back."

[0:06–0:15] Problem

Visual: Screen recording of trying to export a ChatGPT thread, hitting a dead end.

VO: "You back up your photos. Your files. Even your phone. But your AI conversations? Gone the second the tab closes or the provider changes their UI."

[0:16–0:35] Solution Reveal

Visual:TotalRecalls app opens on screen; provider icons (ChatGPT, Claude, Perplexity, Gemini, Grok, DeepSeek, Mistral, Qwen) light up one by one.

VO:"Meet TotalRecalls — a Windows app that downloads your conversations from all eight major AI providers into one private folder on your own computer. No cloud. No account. Just your chats, saved as Markdown and JSON, forever."

[0:36–0:55] Demo

Visual:Screen recording — select provider, sign in, choose folder, watch files populate in File Explorer.

VO:"Pick a provider, sign in, choose where to save — and watch your entire chat history land on your drive in minutes."

[0:56–1:10] Trust/Proof

Visual:Text overlay: "100% local. Zero cloud upload." Folder icon with lock.

VO:"Everything stays on your machine. Nothing is ever uploaded anywhere."

[1:11–1:25] Offer + CTA

Visual:Pricing card: "\$24 USD — one-time, 50% off launch price. No subscription."

VO:"Try it free right now, then unlock every provider and unlimited downloads for a one-time \$24. No subscription, ever."

Text overlay:"Download free on totalrecalls.app — Windows 10/11"

2. "You're Not Backing Up Your AI Chats" (15–20 sec)

Platforms:TikTok, Instagram Reels, YouTube Shorts

Goal:Loss-aversion hook, top-of-funnel awareness.

[0:00–0:04] Hook

Visual:Split screen — left side shows a phone auto-backing up photos; right side shows a laptop with a ChatGPT tab about to close.

Text overlay:"You back up this..."

VO:"You back up your photos."

[0:05–0:09]

Visual:Right side: the tab closes. Text overlay: "...but not this?"

VO:"But not the AI conversations you spent hours on?"

[0:10–0:15]

Visual:TotalRecalls app appears, quickly downloading conversations into a folder.

VO:"TotalRecalls saves every AI chat — ChatGPT, Claude, and more — straight to your PC."

[0:16–0:20] CTA

Visual:Text overlay: "Link in bio · Windows app · Try it free"

VO:"Grab it free on your computer — link in bio."

3. "Trying to Get Your Old AI Conversations Back? Good Luck." (15–20 sec)

Platforms:TikTok, Instagram Reels, YouTube Shorts

Goal:Provider-friction hook, problem-awareness.

[0:00–0:05] Hook

Visual:Person frantically scrolling through ChatGPT sidebar, searching for an old thread that isn't there.

Text overlay:"Trying to find that one chat from 6 months ago?"

VO:"Trying to get an old AI conversation back?"

[0:06–0:10]

Visual:Error messages, "session expired," broken export button.

VO:"Good luck. Providers change their UI, delete sessions, and bury your history."

[0:11–0:16]

Visual:Cut to TotalRecalls folder view — hundreds of Markdown files neatly organized by provider and date.

VO:"Or you could already have it — saved locally, organized, and searchable — with TotalRecalls."

[0:17–0:20] CTA

Text overlay:"Never lose a thread again · totalrecalls.app · Windows"

VO:"Get it on your PC — link in bio."

4. Founder Story (20–30 sec)

Platforms:TikTok, LinkedIn, YouTube

Goal:Build authenticity and trust through personal narrative.

[0:00–0:05] Hook

Visual:Founder speaking directly to camera, casual setting.

VO:"I built TotalRecalls because I lost something I couldn't get back."

[0:06–0:14] The Problem

Visual:Founder gesturing, screen recording insert of a lost ChatGPT thread.

VO:"Months of research, drafts, ideas — all inside AI chats I thought I'd always be able to find. Then a UI update wiped them out. I couldn't get them back. Not from the provider, not anywhere."

[0:15–0:24] The Build

Visual:Quick montage — founder coding, early app screenshots.

VO:"So I built the tool I wished existed: one app that pulls your conversations from every major AI provider and saves them to your own computer. For good."

[0:25–0:30] CTA

Visual: Founder holding up phone/laptop with app open. Text overlay: "Try it free — totalrecalls.app"

VO: "If you've ever lost a conversation you needed, this is for you. Link in bio."

5. "Protect Your Conversations While You Can" — Urgency Ad (10–15 sec)

Platforms: Meta, TikTok, Instagram Stories

Goal: Drive immediate action with urgency and the discounted price.

[0:00–0:04] Hook

Visual: Countdown-style ticking clock overlay on a chat window that suddenly disappears.

Text overlay: "Your AI chats aren't permanent."

VO: "Every AI conversation you have is one update away from disappearing."

[0:05–0:09]

Visual: TotalRecalls app downloading conversations rapidly, folder filling with files.

VO: "Protect them now with TotalRecalls — before it's too late."

[0:10–0:15] CTA

Visual: Pricing card flashes: "\$24 USD — 50% off launch price. One-time. No subscription."

Text overlay: "Limited-time launch price · Windows app · Link in bio"

VO: "Get it on your PC today — link in bio."

Content Calendar

TotalRecalls 60-Day Launch Content Calendar (Blog & Guides)

Date	Platform(s)	Content Type	Topic	Description
Day 1	Blog	Launch Announcement	Introducing TotalRecalls	Announce the public launch of TotalRecalls, framing the problem of vanishing AI conversations (session expiry, UI changes, provider friction) and introducing the app as a 100% local, one-time-purchase solution

				across 8 providers. Include the \$24 launch price (50% off) and a CTA to try the Free Tier.
Day 5	Blog	Founder Story	Why I Built TotalRecalls	A first-person piece from the founder — a retired investment banker turned independent developer — on discovering the problem of lost AI chat history and building a privacy-first, local-only tool to solve it. Reinforces authenticity and trust in a market wary of cloud-based AI tools.
Day 10	Blog	Category Creation / Thought Leadership	Own Your AI Chat Data	An educational piece establishing "AI conversation backup" as its own category, distinct from generic note-taking or cloud sync tools. Covers why multi-assistant download matters in 2026, the risks of relying on providers to retain your history, and how local ownership changes

				the equation. Links out to the "Own your AI chat data" guide for deeper reading.
Day 14	Guides	Provider Guide Spotlight	Download ChatGPT Conversations	Feature the existing ChatGPT export guide, contrasting official download bundles (hard-to-browse HTML) with TotalRecalls' clean Markdown + JSON library. Positions ChatGPT users as the first wave of the provider-specific guide rollout.
Day 18	Guides	Provider Guide Spotlight	Download Your Claude History	Feature the existing Claude export guide, focused on preserving Projects and long threads as durable local files. Reinforces the loss-aversion angle for heavy Claude users managing multi-thread work.
Day 22	Guides	Provider Guide Spotlight	Backup Perplexity Threads	Feature the existing Perplexity guide, emphasizing how research trails disappear when

				sessions expire and how TotalRecalls extracts and preserves them before that happens.
Day 26	Guides	Provider Guide Spotlight	Gemini Takeout → Markdown	Feature the existing Gemini guide, walking through converting Google Takeout ZIP archives into clean, readable Markdown conversations — addressing a common technical pain point for Gemini users.
Day 30	Guides	Provider Guide Spotlight	Downloading Grok Conversations	Feature the existing Grok guide, highlighting session scanning and preservation of referenced X posts alongside chat threads — a detail unique to Grok's ecosystem.
Day 34	Guides	Provider Guide Spotlight	Download DeepSeek Chats	Feature the existing DeepSeek guide, emphasizing preservation of R1 thinking traces (chain-of-thought reasoning) — a feature power

				users will value and one that's accessible even on the Free Tier.
Day 38	Guides	Provider Guide Spotlight	Download Mistral (Le Chat) Conversations	Feature the existing Mistral guide, focused on UTF-8 fidelity for multilingual archives — relevant to EU-based and non-English-speaking users.
Day 42	Blog	Urgency / Promotion	Launch Pricing Ends Soon	A time-sensitive post reminding readers that the \$24 launch price (50% off) is limited-time, reiterating the Free Tier-to-Pro upgrade path and social proof (files secured, providers supported). Designed to convert warm Free Tier users into Pro buyers before the window closes.
Day 45	Guides	Provider Guide Spotlight	Download Qwen Chat Conversations	Feature the existing Qwen guide, clarifying the distinction between chat.qwen.ai (consumer) and the

				DashScope API (developer), and confirming UTF-8 fidelity for international users. Closes out the full 8-provider guide rollout.

Email Sequence

Sequence 1: Core Welcome / Onboarding

Email 1: Your AI chats are more fragile than you think

Subject: Welcome, [First Name] — let's protect your AI chats

Preheader: Sessions expire. Tabs close. Threads vanish.

Hi [First Name],

Thanks for checking out TotalRecalls. You're in the right place.

Here's the uncomfortable truth: every conversation you've had with ChatGPT, Claude, or any other AI assistant is one UI update, one expired session, or one closed tab away from disappearing forever. No warning. No recovery. Just gone.

TotalRecalls fixes that. It's a Windows app that downloads your AI conversations — from ChatGPT, Claude, Perplexity, Gemini, Grok, DeepSeek, Mistral, and Qwen — straight into a private folder on your own machine. No cloud, no account, no risk of losing months of work to someone else's server.

Ready to see your first conversation saved as a file you actually own?

[Try TotalRecalls Free]

Talk soon,

The TotalRecalls Team

P.S. The Free Tier covers 3 providers and 5 conversations per download, so you can test it on your own chats before committing to anything.

TotalRecalls Multi-AI Organization Email

Email 2: One app, eight providers, zero chaos

Subject: Stop juggling 8 different chat histories

Preheader: One local folder for every AI assistant you use

Hi [First Name],

If you use more than one AI assistant, you already know the problem: your best ideas are scattered across ChatGPT threads, Claude projects, and Perplexity research trails, with no way to search across them all.

TotalRecalls solves this by pulling conversations from all 8 supported providers — ChatGPT, Claude, Perplexity, Gemini, Grok, DeepSeek, Mistral, and Qwen — into one library on your PC. Every conversation lands as clean Markdown (readable, searchable) alongside the raw JSON (for anyone who wants to build on it).

No more switching tabs to find that one prompt from three weeks ago. It's all in one place, organized by provider, ready whenever you need it.

[See how it works]

Best,

The TotalRecalls Team

Data Privacy Email Campaign

Email 3: No cloud. No account. Just your files.

Subject: Your conversations, your machine, your rules

Preheader: Nothing you download ever leaves your PC

Hi [First Name],

Here's what makes TotalRecalls different from every other "backup" tool out there: there's nothing to sign up for, and nothing gets uploaded anywhere.

Local sign-in only. Your conversations are saved as plain Markdown and JSON files, directly on your machine. No cloud database holding your data hostage. No account for anyone to compromise. If you switch computers, you just copy the folder — that's the whole migration.

It's your library. Ownership, not access.

Start building yours today:

[Start Building Your Library]

The TotalRecalls Team

TotalRecalls Pro Launch Email

Email 4: Unlock every provider — one time, \$24

Subject:Ready to unlock all 8 providers, [First Name]?

Preheader:One-time \$24. No subscription. Ever.

Hi [First Name],

By now you've seen how TotalRecalls works. Here's what's waiting for you on the other side of Pro:

All 8 providers — ChatGPT, Claude, Perplexity, Gemini, Grok, DeepSeek, Mistral, and Qwen, fully unlocked

Unlimited downloads — no cap on conversations per provider

Free updates — every core app update, for the life of the product

No subscription — pay once, own it forever

Right now, Pro is available at a 50%-off launch price of just \$24 USD. That's a one-time payment — not \$24 a month, not \$24 a year. One purchase, and your entire AI history stays yours.

[Unlock Pro for \$24]

Best,

The TotalRecalls Team

Free-to-Pro Upgrade Email Sequence

Sequence 2:Free-Tier to Pro Upgrade

Email 1: You've seen what TotalRecalls can do. Here's what you're missing.

Subject:[First Name], you're only seeing 3 of 8 providers

Preheader:Pro unlocks the other 5 — and unlimited downloads

Hi [First Name],

You've been using the TotalRecalls Free Tier — nice. But right now, you're only working with a fraction of what the app can actually do.

Free gives you 3 providers and 5 conversations per download. Pro gives you all 8 — ChatGPT, Claude, Perplexity, Gemini, Grok, DeepSeek, Mistral, and Qwen — with no limit on how many conversations you pull each time.

If you're using more than one AI assistant (and let's be honest, most people are these days), Pro is where TotalRecalls really pays off.

[Upgrade to Pro — \$24 one-time]

Talk soon,

The TotalRecalls Team

One-Time Payment Value Email

Email 2: Why \$24 once beats \$10 a month, forever

Subject:The math on "one-time \$24" is pretty simple

Preheader:No subscription. No recurring charge. Ever.

Hi [First Name],

Most tools like this would charge you monthly. TotalRecalls doesn't.

Pro is a one-time payment of \$24 USD — discounted from the regular launch price — and that's it. No renewal, no recurring billing, no "oops, forgot to cancel" surprise on your card next month. You pay once, and you keep every future update to the core app for free.

Compare that to a \$10/month subscription: you'd cross the \$24 mark in under three months, and keep paying indefinitely after that.

This is a buy-it-once tool, in a world full of rentals.

[Get Pro for \$24]

Best,

The TotalRecalls Team

Product Upgrade Persuasion Email

Email 3: Still on the fence?

Subject:Quick question, [First Name] — what's holding you back?

Preheader:Your Free Tier chats are already proof it works

Hi [First Name],

You've already downloaded conversations with TotalRecalls, which means you've already seen the core promise in action: your AI chats, saved as real files, on your own machine.

The only thing standing between you and full access — all 8 providers, unlimited downloads — is a one-time \$24 purchase.

It's easy to tell yourself you'll upgrade "later." But later is exactly when a session expires, a UI changes, or a thread you meant to save quietly disappears. The providers you're not backing up right now are the ones most at risk.

[Unlock Everything for \$24]

If you've got questions before upgrading, just reply to this email — we're happy to help.

TotalRecalls AI Consolidation Email

Email 2: One app. Eight providers. One library.

Subject:You're using more AI tools than you think

Preheader:ChatGPT, Claude, Perplexity, Gemini, Grok, DeepSeek, Mistral, Qwen — all in one place

Hi [First Name],

Quick question:how many different AI assistants have you used this month?

If you're like most people, the answer is more than one. Maybe you draft in ChatGPT, research in Perplexity, and code in Claude. Each one holds a piece of your work, scattered across separate accounts and interfaces you don't control.

TotalRecalls pulls all of it together. One Windows app, eight supported providers — ChatGPT, Claude, Perplexity, Gemini, Grok, DeepSeek, Mistral, and Qwen — downloaded into a single local library organized by provider and date.

No more hunting through browser tabs to find that one conversation from three weeks ago. It's all in one folder, saved as Markdown and JSON files you can search, open, or back up anytime.

[See how it works]

Talk soon,

The TotalRecalls Team

TotalRecalls Privacy Features Email

Email 3: Your chats. Your machine. Nobody else's.

Subject:Your conversations never leave your machine

Preheader:No cloud, no account, no middleman

Hi [First Name],

Let's talk about where your AI conversations actually go once you hit "send."

With most tools, the answer is: somewhere else. A cloud server, a third-party database, an account you don't fully control. TotalRecalls takes a different approach entirely.

Everything runs 100% locally. There's no cloud upload, no account to create, and no sign-in beyond the AI providers themselves. Your downloaded conversations live as plain Markdown and JSON files, right on your own drive in a folder called Library.

That means you can move them, back them up, or copy them to a new PC just by dragging a folder — no login required, no permission needed, no risk of losing access if a service shuts down.

Curious what true ownership feels like?

[Try TotalRecalls Free]

Talk soon,

The TotalRecalls Team

TotalRecalls Pro Upgrade Email

Email 4: Unlock all 8 providers for one \$24 payment

Subject:Ready to unlock the full library, [First Name]?

Preheader:One-time \$24. No subscription. Ever.

Hi [First Name],

By now you've had a taste of what TotalRecalls can do. Here's what's waiting for you on the other side of the Free Tier.

Pro unlocks:

All 8 providers:ChatGPT, Claude, Perplexity, Gemini, Grok, DeepSeek, Mistral, and Qwen — not just 3.

Unlimited downloads:no cap on conversations per provider.

Up to 3 device activations: use it on your desktop and laptop.

Free updates:to the core app, for the life of the product.

And here's the part worth repeating: it's a one-time payment of \$24. Not \$24 a month — \$24, once, for a lifetime license. No subscription, no recurring charge, no surprise renewal.

This is the discounted launch price, and it won't stay this low forever.

[Upgrade to Pro — \$24]

Talk soon,

The TotalRecalls Team

Free-Tier to Pro Upgrade Email

Sequence 2:Free-Tier to Pro Upgrade

Email 1: You're only seeing 3 of 8 providers

Subject:You're missing 5 of your 8 AI providers

Preheader:The Free Tier only shows part of the picture

Hi [First Name],

If you've been using the Free Tier, you've seen how TotalRecalls works — but you've only seen a fraction of what it can do.

Right now, you have access to 3 providers and 5 conversations per download. That's enough to test the waters, but it means conversations in Gemini, Grok, DeepSeek, Mistral, and Qwen are still sitting unprotected, one session away from disappearing.

Pro removes every limit:

All 8 providers, not 3

Unlimited conversations, not 5 per download

The same one-time \$24 price, no matter how much you download

If ChatGPT and Claude are the tip of the iceberg for your AI usage, it's time to protect the rest.

[Unlock all 8 providers]

Talk soon,

The TotalRecalls Team

One-Time Payment Value Email

Email 2: Why \$24 once beats \$10 a month

Subject:Do the math: \$24 once vs. \$10/month

Preheader:Most tools rent you access. This one you own.

Hi [First Name],

Most software today runs on subscriptions. \$10 a month here, \$15 a month there — it adds up fast, and you never actually own anything. Cancel, and access disappears with it.

TotalRecalls works differently. Pro is a one-time payment of \$24. Not a monthly fee, not a yearly renewal — one payment, and it's yours for good, including free updates to the core app.

Compare that to a typical \$10/month tool: you'd break even in a little over two months, and pay nothing after that. A year from now, subscription users are still paying. You won't be.

Own it once. Keep it forever.

[Upgrade to Pro — \$24 one-time]

Talk soon,

The TotalRecalls Team

Pro Upgrade Persuasion Email

Email 3: Still on the fence?

Subject:Still deciding, [First Name]?

Preheader:Here's what's still at risk while you wait

Hi [First Name],

No pressure — but here's something worth thinking about while you weigh your options.

Every day you wait, your conversations in the 5 providers outside your Free Tier stay exactly as exposed as they were before: no local backup, no protection from an expired session or a UI change that quietly wipes your history.

Pro costs \$24, once. That's less than most people spend on a single dinner out, in exchange for a permanent, local archive of everything you've built across ChatGPT, Claude, Perplexity, Gemini, Grok, DeepSeek, Mistral, and Qwen.

If it's the commitment that's holding you back, remember: there's no subscription to cancel, no recurring charge to worry about. Just one payment, and you're covered for good.

[Unlock Pro — \$24]

Talk soon,

The TotalRecalls Team

Launch Urgency Email Sequence

Sequence 3:Launch Urgency

Email 1: Launch pricing ends soon

Subject:50% off ends soon — lock in \$24

Preheader:This launch price won't last

Hi [First Name],

Right now, TotalRecalls Pro is available at 50% off its regular price — just \$24, one-time, for lifetime access to all 8 providers and unlimited downloads.

This is a launch price, and like all launch prices, it's temporary. Once it ends, new Pro licenses will cost more.

If you've been meaning to upgrade, this is the moment. Lock in \$24 before the discount disappears.

[Claim \$24 launch pricing]

Landing Page

Recall every AI conversation.

TotalRecalls is a Windows app that downloads your ChatGPT, Claude, Perplexity, Gemini, Grok, DeepSeek, Mistral, and Qwen chats into a private folder of Markdown and JSON files — yours to keep long after the tab closes and the interface changes.

100% local · zero cloud upload · one-time \$24 purchase, no subscription

[Buy TotalRecalls — \$24 discounted launch price] [Try the Free Tier]

Every day, threads disappear

| chatgpt · download failed · thread lost

| claude · UI revision · 4 threads orphaned

| perplexity · session expired · research trail gone

| gemini · Takeout parse error · 2 archives unreadable

| grok · tab closed · debug session lost

| chatgpt · 9 months of prompts · no backup

This isn't a hypothetical. Every AI conversation you've had lives on someone else's server, subject to someone else's UI update, session timeout, or outage. There's no warning before it's gone — just an empty thread list where months of work used to be.

One library. Every provider. Yours forever.

TotalRecalls pulls your conversations out of eight AI platforms and saves them to a folder on your own drive — no account, no cloud sync, no middleman.

Private by design — Local sign-in only. Nothing you download is ever uploaded anywhere.

One library, eight sources — ChatGPT, Claude, Perplexity, Gemini, Grok, DeepSeek, Mistral, and Qwen, all landing in the same organized folder.

Open formats, no lock-in — Every conversation is saved as plain Markdown and JSON. Search it, back it up, or load it into any tool you already use.

Simple as A, B, C, D

A. Buy once — Checkout via Paddle. One-time \$24 purchase, no subscription, ever.

B. Install — Unzip and run the Windows app. No account required.

C. Pick your providers — ChatGPT, Claude, Perplexity, Gemini, Grok, DeepSeek, Mistral, or Qwen.

D. Download — Your chats land as Markdown and JSON files inside your local Library folder.

Watch a real download happen

See the full workflow in under five minutes: selecting a provider, connecting an account locally, downloading conversations, and opening the finished Markdown files — no cloud step anywhere in the process.

[Watch the demo]

Your library travels with you

There's no cloud account to lose and no proprietary format to get trapped in. Your conversations are ordinary files on your own machine.

Own your files — Saved to your disk as Markdown and JSON. No account, no cloud library.

Open with anything — Standard formats you can search, diff, or load into any other tool.

Move machines freely — Copy your download folder to a new PC and it just works.

Never uploaded — Everything runs locally, start to finish.

Migrating to a new computer is as simple as copying one folder.

One price. Every conversation. Yours forever.

Try it before you commit. The Free Tier lets you test TotalRecalls on your own chats — three providers, five conversations per download — so you know exactly what you're getting before you pay anything.

Pro — \$24 USD, one-time, lifetime license (discounted launch price)

All 8 providers unlocked

Unlimited conversation downloads

Up to 3 device activations

Free updates to the core app for the life of the product

[Buy TotalRecalls — \$24] [Try it free]

Windows 10/11 supported today. Linux and macOS are in development.

Questions, answered

Which providers does it work with?

Eight: ChatGPT, Claude, Perplexity, Gemini, Grok, DeepSeek, Mistral, and Qwen. One app downloads your conversations from all of them into a single local library.

What's the refund policy?

We don't run a standard refund policy — we offer something better. The Free Tier lets you test the app on your own conversations before you buy anything. If you still have a concern after purchasing, reach out and we'll handle it case by case. Your statutory consumer rights are never affected.

Is there a subscription?

No. It's a one-time \$24 purchase at the discounted launch price. You pay once and keep receiving free updates to the core app for the life of the product.

Do I need to create an account?

No. There's no sign-up. Everything is saved locally as files on your own machine.

Is my data uploaded anywhere?

No. TotalRecalls runs 100% locally and never sends your conversations to a server.

Do I get updates?

Yes — free updates to the core app for as long as you own it.

[See all FAQs →]

Stop losing your AI conversations

Every day you wait is another thread that could quietly disappear. Try TotalRecalls free on your own chats, then unlock the full library whenever you're ready.

[Privacy Policy](#) · [Terms of Service](#) · [Pricing & Free Tier](#)

Landing Page

Part 1: Page-by-Page Website Optimization Brief

Homepage

Current state: The homepage leads with a strong privacy/ownership hook but buries it under a "Live Feed" ticker of failure logs, a dense "8 sources → 1 folder" visualization, and a "Forensic View / Action Command Center" motif that reads more like a cybersecurity dashboard than a consumer tool. The CTA hierarchy is flat — "Buy" and "See how it works" are presented with equal visual weight, which pushes cold visitors toward a purchase decision before they've tried the product.

Recommendations:

Simplify the hero. Cut the "Forensic View," "SECURED," and "Command Center" language. It's intriguing but it obscures rather than clarifies what the product does. Replace with plain, benefit-led copy.

Fix the CTA hierarchy. There should be one obvious next step, not three competing ones. Make "Try Free Tier" the primary button (largest, filled), "Watch Demo" secondary (outlined/text), and "Buy Pro" tertiary (smaller link or reserved for the pricing section). Right now, leading with a \$24 purchase ask on a first visit is a conversion risk — most visitors need to trust the tool before paying for it, and the Free Tier exists precisely to build that trust.

Add a plain-language problem section. The "Live Feed" is a clever visual but doesn't explain why conversations get lost. Add a short section that plainly states: chat platforms weren't built for long-term storage, and sessions expire, UIs change, and exports break.

Add a "Who this is for" section. Currently the homepage assumes visitors already know they need this. A short section naming specific use cases (researchers, writers, developers, consultants, anyone juggling multiple AI tools) helps visitors self-identify faster.

Add a founder trust block. The founder's story (45 years in financial services, sole developer, no VC backing) is a strong trust signal that's currently absent from the homepage entirely. A short "why I built this" block adds credibility, especially for a new, unfamiliar app that triggers a Windows SmartScreen warning.

Add a Free vs. Pro comparison. The pricing section currently explains the tiers in paragraph form. A simple side-by-side table will let visitors scan the difference in seconds.

Add product screenshots. The demo video is valuable, but static screenshots of the app (the library folder, a downloaded Markdown file, the provider-selection screen) let visitors evaluate the product quickly without watching a video.

Add an email capture module. For visitors who aren't ready to try the app or buy Pro, an email signup ("Get notified about new providers and features") captures a lead that would otherwise leave with no follow-up path.

FAQ Page

Current state: The homepage FAQ preview covers five solid questions. The full FAQ page (referenced but not shown in full) should expand on these with more depth and objection-handling.

Recommendations:

Organize by category. Group questions into "Getting Started," "Pricing & Licensing," "Privacy & Security," and "Technical" so visitors can scan to what's relevant to them.

Lead with the objection most likely to stop a purchase. For a \$24 one-time tool from an unfamiliar developer, that's almost certainly the SmartScreen warning and "is this safe" concern. Put privacy/security questions near the top, not buried.

Add a question addressing the SmartScreen warning directly, using the plain explanation already written elsewhere on the site ("Windows protected your PC" is standard for new apps, not a malware signal). This content exists on the homepage but should also live in the FAQ, since that's where a hesitant buyer will look for reassurance.

Add a question about data formats ("What exactly do I get in the download folder?") with a concrete example of a file path and format, since portability is a core selling point.

Link each answer to a deeper resource where relevant — e.g., the refund answer can link to Terms of Service, the format answer can link to a guide page.

Close with a soft CTA. End the FAQ page with a line inviting visitors to try the Free Tier, since many FAQ visitors are close to converting but need one more nudge.

Guide Pages (provider-specific: ChatGPT, Claude, Perplexity, Gemini, Grok, DeepSeek, Mistral, Qwen)

Current state: Guide pages are well-scoped by provider and clearly SEO-driven (targeting "export ChatGPT conversations," "backup Perplexity threads," etc.). This structure is sound and should be preserved. The gap is in conversion — these pages likely rank and attract traffic, but internal linking into the funnel appears thin.

Recommendations:

Add a Free Tier CTA near the top of every guide. Someone landing on "Download DeepSeek chats" via search is close to bottom-of-funnel intent. Don't wait until the end of the page to offer the tool — place a "Try TotalRecalls free" button right after the intro paragraph.

Add a mid-page contextual link to the Pro purchase page once the guide explains a limitation of the Free Tier relevant to that provider (e.g., "the Free Tier covers 3 providers and 5 conversations per download — Pro unlocks all eight, including DeepSeek, with no limits").

Cross-link between guide pages. A visitor reading the Claude guide is a good candidate for the "Own your AI chat data" or ChatGPT guide too, since most users run multiple assistants. Add a "Related guides" module at the bottom of each page.

End every guide with the same closing CTA block used elsewhere on the site (Buy / Try Free) so the funnel path is consistent regardless of entry point.

Keep the technical depth (folder structure, troubleshooting, format specifics) — this is what ranks and what technical users are looking for. Don't dilute it with more marketing copy; just bookend it with clear conversion paths.

Pricing Page

Current state: Pricing information exists but is spread across the homepage pricing section and referenced separately as its own page. The core facts — Free Tier limits, one-time \$24 Pro price, no subscription — are clear, but there's no direct side-by-side comparison table.

Recommendations:

Lead with a comparison table, not paragraphs. Two columns (Free Tier vs. Pro), with rows for: providers included, conversations per download, device activations, price, format, support for future updates.

State the discount framing clearly. "\$24 USD, discounted launch price" appears throughout the site — make sure the pricing page explicitly says what the regular price will be (or that it's a limited-time launch rate), so visitors understand the urgency.

Address "no subscription" as a standalone reassurance line, bolded or set apart, since this is a key differentiator from most AI tools in this space.

Reiterate the no-refund/Free-Tier-instead-of-refund logic briefly, with a link to the full FAQ answer, so the pricing page doesn't feel evasive about refunds.

Add the same email capture module as the homepage for visitors not ready to buy.

Close with both CTAs — Try Free Tier and Buy Pro — but keep Try Free Tier visually primary, consistent with the rest of the site.

TotalRecalls Homepage Rewrite

Part 2: Homepage Rewrite

Never lose an AI conversation again

TotalRecalls downloads your ChatGPT, Claude, Perplexity, Gemini, Grok, DeepSeek, Mistral, and Qwen conversations into a private folder on your own computer — saved forever as plain Markdown and JSON files, with zero cloud upload.

[Try the Free Tier] [Watch the demo] · Buy Pro — \$24 USD, one time

Why conversations disappear

Chat platforms weren't built to be permanent. A session expires, a UI update ships, a tab closes at the wrong moment — and months of your best thinking are gone, with no warning and no way back.

A failed download can erase an entire thread.

A Google Takeout file can turn out to be unreadable.

A closed tab can end a debugging session you needed the next morning.

Nine months of prompts can vanish with no backup anywhere.

TotalRecalls exists so none of that has to happen to you again.

Built for anyone who lives across multiple AI tools

If you use more than one AI assistant — which most people do — your best ideas are probably scattered across accounts you don't fully control. TotalRecalls is built for:

Researchers and writers who need a permanent, searchable archive of past conversations.

Developers who want to keep debugging sessions and reasoning traces on hand.

Consultants and analysts who move between providers depending on the task.

Anyone who's ever lost a conversation they wish they'd saved.

If that sounds like you, your library starts with a single download.

One library. Every provider. Yours forever.

100% local, zero cloud upload. Everything runs on your machine. Your conversations are never sent to a server, and there's no account to lose.

One library for eight providers. ChatGPT, Claude, Perplexity, Gemini, Grok, DeepSeek, Mistral, and Qwen — all downloaded into a single, organized folder instead of eight separate silos.

Files you own forever. Every conversation is saved as plain Markdown and JSON. No proprietary format, no lock-in — just files you can open, search, and back up with anything you already use.

Simple as ABCD

A. Try it free. Download the app and test it on your own chats — no account, no commitment.

B. Pick your providers. Choose from ChatGPT, Claude, Perplexity, Gemini, Grok, DeepSeek, Mistral, or Qwen.

C. Download. Your chats land as Markdown and JSON files in your local Library folder.

D. Upgrade when ready. A one-time \$24 purchase unlocks all eight providers with unlimited downloads.

See it work

Watch a real download in action — connecting an account, saving conversations locally, and opening the finished files in Word. It's the same straightforward process for every provider TotalRecalls supports, and your conversations never leave your machine.

[Watch the demo]

[Screenshot: provider selection screen] [Screenshot: Library folder with files organized by provider] [Screenshot: a downloaded conversation opened in Word]

Why I built this

I spent 45 years in financial services, most of it as an investment banker and venture capitalist. I'm not a software company — I'm one developer who got tired of losing conversations I needed later, and used AI tools to build the solution myself. TotalRecalls has no outside investors and no cloud backend collecting your data. It's just a tool that does one thing: keeps your conversations on your own drive, for good.

Your library travels with you

There's no cloud account to lose and no proprietary format to be trapped in. Your conversations are ordinary files sitting on your own machine — move them, back them up, or open them in another tool whenever you like.

Own your files. Every conversation lives on your disk as Markdown and JSON. No account, no cloud library, no lock-in.

Open with anything. Plain, standard formats you can search, back up, diff, or load into any tool you already use.

Move machines freely. Copy your download folder to a new PC and it just works — no login required.

Never uploaded. Everything runs locally, always.

Migrating to a new computer is as simple as copying the download folder. That's the whole process.

Questions, answered

Which providers does it work with?

Eight: ChatGPT, Claude, Perplexity, Gemini, Grok, DeepSeek, Mistral, and Qwen. One app downloads your conversations from all of them.

What's the refund policy?

We don't run a standard refund policy — we have something better. The Free Tier lets you test the app on your own chats before committing to buy. If you still have a refund request after purchasing, contact us and we'll handle it case-by-case. Your statutory consumer rights always apply and are never excluded.

Is there a subscription?

No. It's a one-time \$24 USD purchase at the discounted launch price. You keep receiving free updates to the core app for the life of the product.

Do I need to create an account?

No. There's no account and no sign-up. Everything is saved locally as files on your own machine.

Is my data uploaded anywhere?

No. TotalRecalls runs 100% locally and never sends your conversations to a server.

[See all questions →]

Stop losing conversations you'll want later

Every day you wait is another chat that could disappear behind a closed tab, an expired session, or a UI update. Build your local library now, while everything's still there to save.

FAQ (Frequently Asked Questions)

Is TotalRecalls safe to use, and why does Windows show a warning when I install it?

Yes, TotalRecalls is safe — the "Windows protected your PC" message is a standard SmartScreen notice for newly released, independently developed apps, not a sign of malware. It appears because TotalRecalls hasn't yet built up a reputation history with Microsoft.

To proceed, click More info, then Run anyway. Only download TotalRecalls from the official site, totalrecalls.app, and this warning will fade over time as the app builds trust with Microsoft's systems.

Is there a subscription, or does my data get uploaded to the cloud?

No to both — TotalRecalls has no subscription and no cloud upload. Pro is a one-time \$24 USD purchase at a discounted launch price, with free updates to the core app for life.

The app also runs 100% locally: your ChatGPT, Claude, Perplexity, Gemini, Grok, DeepSeek, Mistral, and Qwen conversations are saved directly to a folder on your own machine as Markdown and JSON files, and they're never transmitted to a server. There's no account or sign-up required either.

What's the difference between the Free Tier and Pro, and which providers are supported?

The Free Tier lets you test TotalRecalls on 3 providers (ChatGPT, Claude, and Perplexity) with up to 5 conversations per download, while Pro unlocks all 8 providers with unlimited downloads for a one-time \$24 USD fee.

TotalRecalls currently supports Windows 10 and 11, with macOS and Linux versions in development. Every download — whether Free or Pro — is saved in the same open, portable Markdown and JSON format, so you can try before you buy with zero risk.

TotalRecalls Launch Announcement Blog

Introducing TotalRecalls: Never Lose an AI Conversation Again

You had a great conversation with an AI assistant last month. It solved a hard problem, mapped out a plan, or captured research you meant to save. Today you go looking for it — and it's gone.

If that's happened to you, you already understand why we built TotalRecalls. This post explains the problem, introduces the tool, and shows you how to keep every AI conversation you care about on your own machine, forever. It'll take about five minutes to read, and you can try the app free by the time you finish.

Why AI conversations disappear

Chat platforms weren't designed to be permanent archives. They're built to answer your question right now — not to guarantee you can find that answer six months from today.

That gap creates real risk. Here's how it plays out:

Sessions expire. You come back to finish a research thread and find the trail wiped out.

Interfaces change. A UI update ships overnight and orphans threads you assumed were safe.

Downloads fail. The official export breaks halfway through, and an entire conversation vanishes.

Tabs close. One accidental click ends a debugging session you needed the next morning. Nothing gets backed up. Nine months of prompts sit in one account, with no copy anywhere else. None of these come with a warning. One day the conversation is there, the next it isn't — and there's no undo button.

The problem gets worse with every tool you add

Most people don't rely on just one AI assistant anymore. You might draft in ChatGPT, research in Perplexity, and code in Claude. Each platform holds a slice of your thinking, locked behind its own login and its own rules.

That's not one backup problem. It's five or six, scattered across accounts you don't fully control. Your best ideas end up fragmented, with no single place to search across them.

Introducing TotalRecalls

TotalRecalls is a Windows app that downloads your AI conversations into a private folder on your own computer. One tool pulls chats from eight providers — ChatGPT, Claude, Perplexity, Gemini, Grok, DeepSeek, Mistral, and Qwen — into a single, organized library.

Every conversation lands as plain Markdown and JSON. Markdown is readable and searchable; JSON keeps the raw structure if you ever want to build on it. Both are open formats, so nothing gets trapped in a proprietary system.

Here's what makes it different from a "backup" feature bolted onto a cloud service:

100% local. Your conversations never touch a server. Everything runs on your machine.

No account. There's nothing to sign up for. You sign in only to the AI providers you already use.

No subscription. One purchase, and it's yours.

Nothing uploaded. Your chats stay on your drive, start to finish.

That last point matters more than it sounds. A lot of tools promise to "protect" your data by copying it somewhere else. We think the safest place for your conversations is the same place as your photos and tax documents — your own computer.

A new category: AI conversation backup

Think about how you already treat things that matter. You back up your photos. You keep copies of important files. You don't assume a service will hold them forever.

Your AI conversations deserve the same treatment. They're becoming a kind of second brain — a record of how you research, write, plan, and solve problems. If that record only lives inside someone else's web app, you don't own it. You're renting access to your own words.

That's the category TotalRecalls sits in: AI conversation backup. Not note-taking. Not cloud sync. Just a simple, permanent way to own the conversations you've already had.

How it works: simple as A, B, C, D

You don't need to be technical to use it. The whole process takes a few minutes.

A. Install the app. Unzip and run it on Windows 10 or 11. There's no installer and no account setup.

B. Pick your providers. Choose from ChatGPT, Claude, Perplexity, Gemini, Grok, DeepSeek, Mistral, or Qwen.

C. Sign in locally. You connect to each AI provider directly. Your session stays on your machine — we never see it.

D. Download. Your chats land as Markdown and JSON files inside a Library folder you choose.

That's it. When you're done, you have a folder of files you can search, back up, or copy to a new PC. Moving to another computer is as simple as dragging the folder over.

Try it free before you pay anything

We didn't want you to take our word for it, so there's a Free Tier. Download the app and test it on your own real conversations — no purchase, no commitment.

The Free Tier covers 3 providers (ChatGPT, Claude, and Perplexity) and up to 5 conversations per download. That's enough to see exactly how it works with your own chats before you decide.

When you're ready for more, Pro unlocks everything:

All 8 providers

Unlimited downloads

Up to 3 device activations

Free updates to the core app for life

Pro is a one-time \$24 USD purchase — our discounted launch price, 50% off the regular rate. Not \$24 a month. Not a subscription you'll forget to cancel. One payment, and your library stays yours.

A quick note on trust

One honest heads-up: when you first run TotalRecalls, Windows may show a "Windows protected your PC" SmartScreen warning. That's standard for any new, independently developed app — it's not a sign of malware. Click More info, then Run anyway, and you're set. As the app builds a track record with Microsoft, the warning fades.

I'll also tell you who's behind this. I'm the sole developer of TotalRecalls. Before this, I spent more than 45 years in financial services as an investment banker and venture capitalist. There's no outside funding and no growth team harvesting your data — just one person who got tired of losing conversations and built the fix. That's also why the model is simple: local files, one-time price, no cloud backend with an appetite for your history.

Start your library today

Your AI conversations shouldn't vanish because a tab closed or an interface changed. The fix is straightforward, and you can start right now.

Here's your next step:

Download the Free Tier and run it on Windows.

Pick a provider you use often — ChatGPT, Claude, or Perplexity.

Save a few conversations and open the Markdown files to see what you get.

If it earns a spot in your workflow, unlock Pro for a one-time \$24 and cover all eight providers with no limits. Either way, you'll finally have your conversations where they belong: on your own machine, in files you own for good.

Welcome to TotalRecalls. Let's make sure you never lose a conversation again.

TotalRecalls Launch Gap Checklist

TotalRecalls Launch Gap Checklist

This checklist maps every remaining launch item back to the original organization document, so you can see at a glance what's done, what's partly done, and what still needs work. Each section uses the same three-phase roadmap from the plan: Phase 1 (Days 1–10), Phase 2 (Days 14–38), and Phase 3 (Days 42–45).

Status key: ☒ Complete · ☐ Partial · ☐ Open

TotalRecalls is a Windows app that downloads your AI conversations into a local folder — \$24 one-time Pro, with a free tier so people can try before they buy.

1. Content

Copy and creative work called for in the roadmap.

Blog posts

☐ Launch announcement — "Introducing TotalRecalls" (Phase 1, Day 1)

A blog-style draft now exists. Still open: final formatting for the live blog, meta title/description, and scheduling against Day 1.

☐ Founder story — "Why I Built TotalRecalls" (Phase 1, Day 5)

Not yet created as a dedicated post. The founder angle appears in social and landing copy, but the standalone Day 5 piece is still needed.

☒ Category piece — "Own Your AI Chat Data" (Phase 1, Day 10)

Covered by the live pillar guide. No new writing required; just confirm the Day 10 post links to it.

☐ Urgency post — "Launch Pricing Ends Soon" (Phase 3, Day 42)

Not yet created in final blog form. Email and ad urgency copy exist, but the Day 42 blog post itself is still open.

Organic social

☐ Organic social series

A first batch of posts exists (X, Instagram, LinkedIn, Facebook). Still open:

☐ a structured social calendar tied to each phase

☐ posts aligned to every provider spotlight (Phase 2, Days 14–38)

☐ founder-led posts

☐ education and trust posts

☐ deadline/urgency posts for the launch-price window (Phase 3)

☐ per-platform repurposing rules

Supporting content (already in hand)

☒ Provider guides (all 8) — live on the site.

☒ Video script and outline — complete.

☒ Headlines set — complete.

☒ 60-day content calendar — complete.

2. Strategy / Operations

The planning layer that turns content into a running campaign.

Publishing and infrastructure

☐ Publishing schedule mapped to the 45-day roadmap

You have a content calendar, but not a final schedule that says what publishes on which day, in which channel, with which CTA. Build this across all three phases.

☐ Live blog infrastructure confirmed

The roadmap flags this as a Day-1 dependency. The blog section still needs to exist and be publish-ready before Phase 1 posts can go out.

Audience and targeting

☐ Audience segmentation map

Define three clear buckets and the rules that move people between them:

Prospects (subscribed for updates/guides)

Free Tier users (tried, not upgraded)

Buyers (purchased Pro)

☐ Retargeting plan for Phase 3 (Days 42–45)

Spell out retargeting audiences, exclusion logic (don't re-sell to buyers), and how retargeting reinforces the Day 42 urgency push.

Measurement

☐ KPI dashboard / measurement plan

Set targets and a reporting cadence:

success metrics per phase

KPIs per channel

what to review at Week 1, Week 3, and Week 6

criteria for extending or ending the launch-price urgency

Strategy assets already done

- ✅ Campaign brief — complete.
- ✅ Consolidated launch plan — complete.
- ✅ Ad copy — created since the original doc.
- ✅ Email sequences — created since the original doc.
- ✅ Website/homepage recommendations — created since the original doc.
- ✅ List-building / email capture plan — created since the original doc.

3. Execution

The operations layer that keeps everything moving on schedule.

- ☐ Cross-channel publishing plan

One master view showing how blog, social, email, ads, and video line up across Phases 1–3, so channels reinforce each other instead of firing at random.

- ☐ Campaign operations layer

The day-to-day run sheet:

launch-week schedule (Phase 1)

asset deployment plan by day

channel-by-channel publishing checklist

owner and responsibility for each task

KPI tracking tied to the measurement plan

- 🟡 Phase-based rollout details

The high-level phases are defined, but the per-phase execution steps (exact assets, versions, and CTAs per day) are still thin. Tighten these for each phase:

Phase 1 (Days 1–10): launch, founder story, category piece

Phase 2 (Days 14–38): 7 provider spotlights + short-form cuts

Phase 3 (Days 42–45): urgency post, Qwen spotlight, email + retargeting

Quick summary

Fully complete ☒

"Own Your AI Chat Data" category coverage

Provider guides, video assets, headlines, content calendar

Campaign brief, launch plan, ads, email, website recs, list-building plan

Partially complete ☐

Launch announcement blog post

Organic social (batch done, program not)

Phase-based rollout details

Still open ☐

Founder story blog post

Urgency/pricing-deadline blog post

Publishing schedule + live blog confirmation

Audience segmentation + retargeting plan

KPI/measurement plan

Cross-channel publishing plan + campaign operations layer

What to tackle first

The biggest remaining gap is no longer writing — it's execution structure. To get launch-ready, prioritize in this order:

Confirm live blog infrastructure (blocks all Phase 1 posts)

Finish the three open/partial blog posts (announcement, founder story, urgency)

Build the publishing schedule and cross-channel plan

Define audience segmentation and the Phase 3 retargeting plan

Stand up the KPI dashboard

Build out the organic social program

Clear these six, and every piece from the original organization document is either done or scheduled.

TotalRecalls Launch Readiness Plan

TotalRecalls Launch Readiness Plan

This is the companion to the gap-closing checklist. Where the checklist tells you what's still open, this plan tells you how to run the launch — day by day, channel by channel, asset by asset. It turns everything you've created (guides, video, headlines, ads, email sequences, blog posts, social, website copy) into a single execution sequence.

Who this is for: anyone owning the TotalRecalls launch — deciding what ships, when, to whom, and how you'll know it worked.

What you'll get:

Infrastructure you must have live before Day 1

An audience segmentation map to route the right message to the right person

A phase-by-phase execution plan (Phases 1–3) with channels, assets, CTAs, and timing

A Phase 3 retargeting plan

A KPI framework with per-phase metrics and a review cadence

The product itself stays simple throughout: TotalRecalls downloads your AI conversations from eight providers into a private local folder as Markdown and JSON. Pro is a one-time \$24, and a Free Tier lets people try before they buy. Every message in this plan points back to that.

Infrastructure prerequisites (before Day 1)

Nothing in Phase 1 can ship until these are live. Treat this as your pre-launch gate.

1. Live blog section

The roadmap flags this as a Day-1 dependency. The blog must exist, be publish-ready, and support scheduled posts before the launch announcement goes out.

Blog template with clean heading hierarchy and a visible CTA slot

Meta title/description fields working

At least the Day 1 announcement post loaded and scheduled

2. Email capture and platform

Your list is the engine for Phase 3 conversion, so it has to be collecting from Day 1.

Signup forms live on homepage, guide pages, and pricing/buy pages

A "notify me" capture for macOS/Linux and new-provider updates

Email platform connected with tagging, automations, and basic analytics

Welcome sequence wired to trigger on new signups and free-tier downloads

3. Segmentation and tracking

You can't target or measure without this in place first.

Three audience tags created (see segmentation map below)

Free-tier download event feeding the "free-tier user" tag

Purchase event feeding the "buyer" tag

Analytics and UTM conventions set so each channel and phase is trackable

Retargeting pixels installed on homepage, pricing, and download pages

Mini-summary: If the blog isn't live, the list isn't collecting, and the tags aren't firing, hold the launch. These three unlock every phase that follows.

Audience segmentation map

Three buckets carry the whole campaign. Every asset should be aimed at one of them, and people should move between buckets as they act.

Bucket A — Prospects

People who subscribed for updates or guides but haven't downloaded anything.

Mindset: curious, still evaluating the "why."

Primary CTA: Try the Free Tier.

Message focus: loss aversion, ownership, category education.

Bucket B — Free-tier users

People who downloaded and tested the app but haven't upgraded to Pro.

Mindset:convinced it works, not yet convinced to pay.

Primary CTA:Upgrade to Pro — \$24 one-time.

Message focus:the 5 locked providers, unlimited downloads, one-time price vs. subscriptions.

Bucket C — Buyers

People who purchased Pro.

Mindset:committed customer.

Primary CTA:none commercial — no re-selling.

Message focus:onboarding, tips, new-feature and new-provider updates. Exclude from all urgency and retargeting sell messages.

Movement rules:A prospect who downloads becomes B. A free-tier user who buys becomes C. Suppress buyers (C) from every upgrade and urgency send.

Phase 1 — Launch & category introduction (Days 1–10)

Goal:announce the product, build trust, and establish "AI conversation backup" as a category.

Primary audience:Prospects (Bucket A) and net-new cold visitors.

Primary CTA across the phase: Try the Free Tier.

Publishing schedule

Day	Channel	Asset	Primary CTA	Audience
1	Blog	Launch announcement post ("Introducing TotalRecalls")	Try the Free Tier	Cold + Prospects
1	Email	Launch announcement broadcast (welcome sequence Email 1 for new signups)	Try the Free Tier	Prospects
1	Video	Primary launch video (Claude demo walkthrough) embedded in post + social	Watch the demo	Cold + Prospects

1	Paid social	Launch awareness ad set	Try the Free Tier	Cold lookalike + interest
5	Blog	Founder story post ("Why I Built TotalRecalls")	Try the Free Tier	Prospects
5	Social	Founder-led organic post (LinkedIn lead, cross-posted)	Read the story / Try free	Cold + Prospects
10	Blog	Category piece linking to the "Own Your AI Chat Data" pillar guide	Try the Free Tier	Cold + Prospects
10	Email	Welcome sequence Email 2 (one app, eight providers)	Try the Free Tier	Prospects

Email activation

Day 1: broadcast to any existing prospects; welcome sequence begins auto-triggering for every new signup.

Day 10: second welcome email reinforces multi-provider value.

Free-tier downloaders start entering Bucket B automatically — do not send them Phase 1 acquisition emails again.

Ad activation

Launch awareness ads go live Day 1, optimized for free-tier downloads.

Keep creative on the loss-aversion hook and the "\$24 one-time, no subscription" line.

Begin building retargeting audiences now (site visitors, video viewers) for use in Phase 3.

Audience targeting notes

Lead with the problem, not the price. Cold audiences need the "why conversations disappear" framing before the offer lands. Surface "Windows 10/11 today, macOS/Linux in development" early to avoid wrong-click friction.

Mini-summary:Phase 1 is about trust and category. Push the free download, not the purchase, and quietly start filling your retargeting pools.

Phase 2 — Provider spotlight rollout (Days 14–38)

Goal:capture provider-specific search demand and prove breadth across all supported providers.

Primary audience:Cold search traffic + Prospects, with a soft nudge to Free-tier users.

Primary CTA:Try the Free Tier (with a mid-content Pro nudge once a free-tier limit is mentioned).

(Qwen closes the series in Phase 3, Day 45.)

Channel and asset notes

Each spotlight links to its live guide and reuses the headline set for titles and social hooks.

Pair every spotlight with a short-form video cut from the primary launch video for social reach.

Add a "Related guides" cross-link block to each post — most users run more than one assistant, so this drives internal depth.

Email activation

Send a lightweight "new guide live" note to Prospects roughly weekly, batching two spotlights per send to avoid fatigue.

For Free-tier users, tie each spotlight to a locked provider: "DeepSeek is one of the 5 providers Pro unlocks." This is a soft upgrade nudge, not a hard sell.

Ad activation

Run low-budget, high-intent search/social ads against provider-specific terms (e.g., "download ChatGPT conversations").

Keep retargeting pools growing from spotlight traffic for the Phase 3 push.

Audience targeting notes

Spotlight visitors arrive with bottom-of-funnel intent — they're searching how to save a specific provider's chats. Put the free-tier CTA near the top, not buried at the end. Keep the technical depth intact; it's what ranks and what these readers want.

Mini-summary:Phase 2 is your SEO engine. Match each provider to its search intent, convert with an early free-tier CTA, and quietly grow the audiences Phase 3 will convert.

Phase 3 — Urgency & conversion (Days 42–45)

Goal:convert warm free-tier users into Pro buyers before the launch discount ends, and close out the guide series.

Primary audience:Free-tier users (Bucket B) + warm retargeting pools.

Primary CTA:Buy Pro — \$24 one-time (launch price).

Publishing schedule

Day	Channel	Asset	Primary CTA	Audience
42	Blog	Urgency post ("Launch Pricing Ends Soon")	Buy Pro — \$24	Free-tier + warm
42	Email	Urgency Email 1 ("24 launch price won't last")	Buy Pro — \$24	Free-tier + Prospects
42	Paid social	Retargeting urgency ad set goes live	Buy Pro — \$24	Warm retargeting pools
43	Email	Urgency Email 2 ("48 hours left at \$24")	Buy Pro — \$24	Free-tier + Prospects
45	Email	Urgency Email 3 ("Last call — ends tonight")	Buy Pro — \$24	Free-tier + Prospects
45	Blog + short-form video	Qwen spotlight → Qwen guide	Try the Free Tier / Buy Pro	Cold + Prospects

Phase 3 retargeting plan

This is where your Phase 1–2 audience-building pays off.

Retargeting audiences to activate:

Site visitors who viewed the pricing or buy page but didn't purchase

Free-tier download-page visitors and confirmed free-tier users

Video viewers (25%+ watched) from the launch and spotlight cuts

Guide-page readers from Phase 2

Exclusions (critical):

Suppress all buyers (Bucket C) from every retargeting ad and urgency email.

Suppress anyone who purchases mid-sequence — sync the buyer tag to your ad platform daily so paying customers stop seeing sell ads.

Creative and cadence:

Lead with the deadline and the one-time-vs-subscription math.

Reuse ad urgency copy already created; mirror the email subject lines for consistency.

Frame around the 5 locked providers for free-tier users specifically.

Email activation

Three-email countdown over Days 42–45 (heads-up → 48 hours → last call).

Send to Free-tier users first (highest intent), then Prospects.

Hard-exclude buyers. Remove anyone who converts between sends.

Audience targeting notes

Free-tier users have already seen the product work — you don't need to re-sell the concept, only the deadline. Prospects still need the value reminder folded into the urgency. Keep both honest: the price is a genuine launch discount, so state clearly what happens when it ends.

Mini-summary:Phase 3 is a tight, time-boxed conversion sprint. Point everything at warm free-tier users, exclude buyers cleanly, and let the deadline do the work.

KPI measurement framework

Measure per phase against the job each phase is meant to do. Don't judge Phase 1 on sales or Phase 3 on awareness.

Phase 1 metrics (awareness & trust)

Free-tier downloads (primary)

Blog traffic + time on page for the three posts

Launch video views and completion rate

Email signups and welcome-sequence open/click rates

Cost per free-tier download from ads

Phase 2 metrics (search & breadth)

Organic traffic per provider spotlight

Guide-page rankings for target terms

Free-tier downloads attributed to spotlight pages

Short-form video reach and engagement

Free-tier → Pro soft-nudge click-through

Phase 3 metrics (conversion)

Pro purchases (primary)

Free-tier → Pro conversion rate

Urgency email open, click, and conversion rates

Retargeting ad ROAS and cost per purchase

Revenue against launch-window target

Review cadence

Week 1 (end of Phase 1): Are downloads and signups tracking to target? Adjust ad creative and spend if cost per download is high.

Week 3 (mid Phase 2): Which spotlights are ranking and converting? Double down on winners; refresh underperformers.

Week 6 (end of Phase 3): Final conversion review. Did the discount hit its revenue target? Decide whether to extend, close, or step the price up as planned.

Standing rule: check the buyer-exclusion sync daily during Phase 3 so no customer sees a sell message after purchasing.

Common pitfalls to avoid

Launching before infrastructure is live. No blog or list means Phase 1 assets have nowhere to land and no one to nurture.

Selling Pro too early. Cold audiences need trust first — push the free download in Phases 1–2.

Fatiguing your list. Batch Phase 2 guide emails; don't send one per spotlight.

Re-selling to buyers. Without a daily buyer-exclusion sync, paying customers get urgency ads — the fastest way to annoy your best users.

Judging phases by the wrong metric. Awareness in Phase 1, search in Phase 2, conversion in Phase 3.

Next steps

Your remaining work is execution structure, not copywriting. To reach launch-ready, move in this order:

Stand up the infrastructure gate: live blog, email capture, segmentation, and tracking.

Load and schedule the Phase 1 assets against Days 1, 5, and 10.

Queue the seven Phase 2 spotlights with their short-form cuts and cross-links.

Build the Phase 3 retargeting audiences now, and set the buyer exclusions.

Wire the KPI dashboard so each phase reports against its own goal.

Clear those five, and every asset you've built is either live or scheduled — turning a folder of content into a running, measurable launch.

Social Media Posts

Launch-Day Social Posting Checklist — TotalRecalls

Pre-Launch Prep (Complete Before 8:00 AM Launch)

Confirm blog launch announcement is live and grab its final URL

Confirm Day 1 launch email has sent (or is scheduled) — note the exact send time for cross-channel alignment

Pull final asset list:

Claude demo video (totalrecalls_demo_claude_hero.mp4) — trimmed to a 15-30 sec teaser cut for Instagram/X if possible

1-2 static screenshots of the "8 sources → 1 folder" convergence graphic

1 screenshot of the Library file explorer view (shows Markdown/JSON files organized by provider)

Logo/wordmark asset for LinkedIn (square crop) and Facebook (landscape crop)

Confirm live buy link: <https://www.totalrecalls.app/buy/>

Confirm Free Tier link: <https://www.totalrecalls.app/download/>

Have UTM-tagged links ready for each platform (e.g.,
[?utm_source=facebook&utm_medium=social&utm_campaign=launch](https://www.totalrecalls.app/buy/?utm_source=facebook&utm_medium=social&utm_campaign=launch)) so click attribution is trackable

Pre-stage all four posts as drafts in scheduler (Buffer/Hootsuite/native composer)

Assign one team member to monitor comments/DMs across all four platforms for the first 4 hours post-launch

Posting Order & Timing (Day 1)

Stagger posts to avoid audience fatigue and to align with the email send:

9:00 AM — LinkedIn (post first; professional audience, sets credible tone ahead of broader consumer platforms)

9:15 AM — X (fast-moving platform, good for early momentum and retweets)

10:00 AM — Facebook (slightly later, allows LinkedIn/X engagement to build social proof before wider audience sees it)

12:00 PM — Instagram (midday slot for higher visual engagement; caption has no clickable link, so bio link must be updated first — see below)

Important: Update the Instagram bio link to the Free Tier landing page before 12:00 PM, since the caption cannot include a clickable URL.

Cross-Channel Coordination Notes

Email send and blog post should both go live by 9:00 AM to match the LinkedIn post — all Day 1 channels should point to the same core narrative (losing AI conversations → local ownership solution).

Reference the blog post URL in the Facebook post and LinkedIn post (not X or Instagram, to keep those formats native and link-light).

If the blog post includes the Claude demo video embed, reuse the same video asset for Facebook and LinkedIn to maintain visual consistency.

Avoid posting identical copy across platforms verbatim — captions below are already adapted per platform.

LinkedIn Post

Every day, AI conversations disappear — a closed tab, a UI update, an expired session, and months of prompts, research, or debugging threads are gone for good.

TotalRecalls is a Windows app that downloads your ChatGPT, Claude, Perplexity, Gemini, Grok, DeepSeek, Mistral, and Qwen conversations into a private local folder as Markdown and JSON. No cloud upload. No subscription. One-time \$24 purchase.

Try the Free Tier and start owning your conversations: [\[link\]](#)

TotalRecalls AI Chat Backup X Post

X Post

Closed a tab and lost 9 months of ChatGPT prompts? Never again.

TotalRecalls downloads your AI chats from 8 providers into local Markdown + JSON files. 100% local. \$24 one-time.

Try it free: [\[link\]](#)

Asset: Convergence graphic screenshot or short video teaser

Hashtags: #AI #ChatGPT (use sparingly, max 1-2)

TotalRecalls Data Privacy Facebook Post

Facebook Post

Your AI conversations aren't as safe as you think. 🧠

A closed tab, a UI redesign, an expired session — and months of ChatGPT, Claude, or Gemini history can vanish without warning.

TotalRecalls fixes that. It's a Windows app that downloads your conversations from 8 AI providers (ChatGPT, Claude, Perplexity, Gemini, Grok, DeepSeek, Mistral, and Qwen) straight into a private folder on your own computer — saved as Markdown and JSON, with zero cloud upload.

- ✅ 100% local, no account needed
- ✅ One-time \$24 purchase, no subscription
- ✅ Try the Free Tier before you buy

Don't wait until your conversations are gone. Regain ownership today 📌 [\[link\]](#)

Asset: Claude demo video (full or long cut) + convergence graphic

Hashtags: #AITools #DataPrivacy (use sparingly)

TotalRecalls Product Launch Instagram Post

Instagram Caption

Lost a ChatGPT thread you needed? Yeah, we've all been there. 😞

TotalRecalls saves your AI conversations — from ChatGPT, Claude, Perplexity, Gemini, Grok, DeepSeek, Mistral & Qwen — straight to your computer. 100% local, zero cloud upload.

Try the Free Tier today — link in bio!

#AITools #ChatGPT #DataOwnership #TechLaunch #ProductivityHacks

Asset: Short video teaser (trimmed Claude demo) or carousel of screenshots (convergence graphic + library file view)

Note: Update bio link to Free Tier page before publishing

Post-Launch Monitoring (First 24 Hours)

Check all four platforms every 1-2 hours for comments, questions, and DMs

Watch for SmartScreen warning questions (Windows security prompt) — have the explainer response ready and link to the FAQ/support email

Track click-through on UTM-tagged links to see which platform is driving the most Free Tier signups

Reshare any strong organic engagement (positive comments, shares) as Stories/reposts by end of Day 1

Flag any recurring objections or questions to feed into a Day 2 or 3 follow-up post (e.g., FAQ carousel)

TotalRecalls Landing Page Hero

Landing Page (Homepage Hero Section)

Your AI conversations aren't backed up. Yet.

A closed tab, an expired session, a UI redesign — and months of ChatGPT, Claude, or Gemini conversations are gone for good. TotalRecalls downloads your chats from all eight major AI providers into a private folder on your own PC, saved as plain Markdown and JSON files you can keep forever.

No cloud upload. No subscription. No account required.

One app, eight providers: ChatGPT, Claude, Perplexity, Gemini, Grok, DeepSeek, Mistral, Qwen

Everything stays local — your conversations never touch our servers

One-time \$24 purchase, discounted launch price — no recurring fees, ever

Free tier available: try it on 3 providers before you buy

[Buy TotalRecalls — \$24 USD, discounted launch price] [Try the free tier]

Campaign Brief

TotalRecalls Launch Campaign

Campaign Overview

TotalRecalls is entering the market with a clear mission: help everyday AI users protect the conversations they've come to rely on, before those conversations disappear for good. This 60-day launch campaign introduces TotalRecalls — a Windows desktop app that downloads and permanently saves AI conversations from eight major providers (ChatGPT, Claude, Gemini, Grok, Perplexity, Mistral, Qwen, and DeepSeek) — to the general public.

The campaign's core job is twofold: build broad awareness of a problem most people don't realize they have (their AI chat history is fragile and easily lost), and convert that awareness into one-time purchases at the discounted \$24 launch price. Since this is TotalRecalls' first major push to market, the campaign also lays the groundwork for word-of-mouth and organic discovery well beyond the initial 60 days.

Objectives

Drive 5,000 unique visits to the TotalRecalls landing page within the first 60 days.

Convert at least 8% of free tier users into paid Pro purchases (\$24) by day 60.

Achieve 1,000 total Pro purchases by the end of the campaign period.

Grow combined social following (X, LinkedIn, Facebook) by 2,000 followers within 60 days.

Generate at least 500 email sign-ups for ongoing product updates and offers.

Target Audience

Primary audience

General consumers of all ages who regularly use AI assistants like ChatGPT, Claude, or Gemini for work, research, creative projects, or everyday questions. Many don't realize how easily their conversation history can be lost — through UI changes, expired sessions, or provider limitations. This audience isn't necessarily technical, but they are AI-curious and value convenience, privacy, and getting more out of the tools they already use. Their pain point is loss aversion: they've likely already lost a valuable chat and felt that sting, or they will soon.

Secondary audience

Privacy-conscious professionals and power users (developers, researchers, writers) who use multiple AI providers side-by-side and want a reliable, local way to consolidate and own their data without relying on cloud storage or subscriptions. This group is more likely to be early adopters and vocal advocates if the product delivers on its promise.

Key Messages

Ownership: Your AI conversations are yours. TotalRecalls stores them permanently on your own machine — no cloud, no account, no company holding your data hostage.

Loss-aversion & urgency: You back up your photos and files — why not your AI conversations? They can vanish overnight due to session expirations, UI changes, or provider errors. Protect them now, while you still can.

Convenience: One simple app covers all eight major AI providers, replacing a patchwork of manual exports and awkward workarounds.

Privacy: 100% local. Zero cloud upload. Your conversations never leave your machine.

Freedom from subscriptions: Pay once (\$24, 50% off at launch), own it forever. No recurring fees, ever.

Founder authenticity: Built by someone who personally hit a wall trying to retrieve his own AI conversations — TotalRecalls exists because the problem was real, and the fix didn't.

Deliverables

Channel	Asset	Description	Due Date
Website	Landing page optimization	Refine hero messaging, CTA placement, and FAQ section to maximize conversion from ad traffic	Day 5
Search (Google)	Search ad campaign	Target high-intent keywords like "backup ChatGPT conversations," "export Claude chat history"	Day 7
Meta (Facebook/Instagram)	Ad set (3 variations)	Loss-aversion and ownership-focused creative aimed at general AI users	Day 7
X (Twitter)	Ad campaign	Urgency and founder-authenticity messaging targeting AI power users and early adopters	Day 10
LinkedIn	Ad campaign	Privacy and productivity angle targeting professionals and researchers	Day 10
Email	Welcome + nurture sequence (5 emails)	Onboard free tier sign-ups and guide them toward Pro purchase	Day 12
Organic Social	Launch post series (Facebook, X, LinkedIn)	Announce launch, share founder story, highlight urgency and provider coverage	Day 1-14

Blog	"Your AI Chats Can Vanish Overnight"	Long-form piece exploring real cases of lost AI conversations and how to prevent it	Day 14
Blog	"You Backup Your Files. Why Not Your AI Chats?"	Thought-leadership piece connecting familiar backup habits to AI chat preservation	Day 21
Blog	Provider-specific guides (ChatGPT, Claude, Gemini, etc.)	SEO-focused guides driving organic search traffic for each supported provider	Day 14-45
Social	"Save 50% Before Your Chats Disappear" promo push	Time-sensitive urgency campaign across all social channels reinforcing discount	Day 30
Email	Mid-campaign discount reminder	Re-engage free tier users who haven't converted with urgency-driven offer reminder	Day 35
Social/Email	Founder story feature	Share the founder's personal experience and background to build trust and authenticity	Day 40

Timeline

Days 1-5: Finalize landing page optimizations, prepare all ad creative and copy, set up tracking and analytics.

Days 5-14: Launch search, Meta, X, and LinkedIn ad campaigns. Begin organic social posting cadence. Deploy email welcome sequence for new free tier sign-ups. Publish first two blog posts.

Days 14-30: Continue paid ad optimization based on early performance data. Roll out provider-specific SEO guides on a staggered schedule. Monitor free-to-paid conversion rates and adjust messaging as needed.

Day 30: Launch "Save 50% Before Your Chats Disappear" urgency push across paid and organic social channels.

Days 30-45:Continue publishing provider guides. Send mid-campaign discount reminder email to unconverted free tier users. Analyze which channels and messages are driving the strongest conversions.

Day 40: Feature founder story across social and email to deepen trust and authenticity with the audience.

Days 45-60:Double down on best-performing channels and creative. Begin planning for post-campaign retention and referral strategy.

Day 60: Campaign wrap-up and full performance review against objectives, informing next-phase strategy.

Video Outline

TotalRecalls Main Product Explainer — Video Outline

Title

"Recall Every AI Conversation" — TotalRecalls Product Explainer

Objective

Drive Pro license purchases (\$24 USD, one-time, discounted launch price) by demonstrating how TotalRecalls solves the problem of lost AI conversation history, while building trust through its 100% local, privacy-first design.

Target Audience

Knowledge workers, developers, researchers, and writers who use multiple AI assistants daily and are privacy-conscious or have already lost a valuable conversation. Primary platforms: YouTube, Instagram Reels, and Meta (Facebook/Instagram Feed).

Key Messages

AI conversations disappear without warning — and most people aren't backing them up.

TotalRecalls downloads chats from 8 major providers into one local folder, forever.

Everything happens locally — zero cloud upload, no account required.

One-time \$24 launch price (50% off), with a free tier to try first.

Available now for Windows 10/11 — mobile viewers must visit totalrecalls.app on a PC.

Duration

Total runtime:75 seconds (fits the 45–90 sec range for this format)

Video Outline

Introduction (0:00–0:12)

Open on the "Live Feed" ticker visual — real-looking log entries scrolling past: "chatgpt · download failed · thread lost," "claude · ui revision · 4 threads orphaned," "chatgpt · 9 months of prompts · no backup."

Voiceover:"Every day, AI conversations disappear. A session expires. A UI changes. A tab closes. And just like that — months of work, gone."

Visuals/Audio: Dark background, scrolling log ticker with a subtle glitch/flicker effect on each "lost" entry. Low, tense ambient audio bed. Text overlays highlight key phrases ("thread lost," "no backup") in red.

Main Content

Segment 1: The Problem (0:12–0:22)

Voiceover: "You back up your photos. You back up your files. But your AI conversations? Chances are, they're one error message away from vanishing forever."

Visuals/Audio: Split-screen showing a folder icon labeled "Photos — Backed Up" next to a fading/dissolving chat bubble labeled "AI Chats — Not Backed Up." Audio bed shifts to a more contemplative tone.

Segment 2: The Solution Reveal (0:22–0:32)

Voiceover: "Meet TotalRecalls — a Windows app that downloads your conversations from ChatGPT, Claude, Perplexity, Gemini, Grok, DeepSeek, Mistral, and Qwen into one private folder on your own computer."

Visuals/Audio: Logo animation reveal (blue brain in speech bubble). Provider icons animate in from all sides, converging into a single folder icon labeled "Library." Audio swells slightly, more upbeat and confident.

Segment 3: The Demo (0:32–0:55)

Voiceover: "Pick a provider. Sign in. Hit download. Your conversations land as Markdown and JSON files, ready to open, search, or store however you like."

Visuals/Audio: Screen-capture footage from the Claude demo: Step 1 (choose provider) → Step 2 (connect account) → Step 3 (files populating in File Explorer) → completed download with file summary. Show a downloaded Markdown file opening in Word, scrolling through formatted conversation text. Light, upbeat background music continues; on-screen captions reinforce each step ("Select," "Connect," "Download," "Done").

Segment 4: Trust & Proof (0:55–1:03)

Voiceover: "No cloud. No account. No uploads. Everything stays on your machine — 100% local, by design."

Visuals/Audio: Visual badge overlay: "100% Local · Zero Cloud Upload." Show the "This PC → New PC" file migration graphic to reinforce portability. Audio tone remains confident and steady.

Conclusion (1:03–1:15)

Voiceover: "Try TotalRecalls free today. Or unlock every provider and unlimited downloads for a one-time \$24 — 50% off the launch price. No subscription. Ever."

Visuals/Audio: Pricing card visual: "\$24 USD · one-time · lifetime license · discounted launch price." End card with logo, URL (totalrecalls.app), and button-style text overlays: "Try Free" and "Buy Now." Music resolves to a clean, confident final note.

Call to Action (on-screen text + voiceover): "Visit totalrecalls.app on your Windows PC to get started." (For mobile placements, reinforce verbally and on-screen that viewers need to visit the site from a desktop — never direct to an app store.)

Visuals and Audio Summary Table

Section

Section	Duration	Key Visual	Audio Tone
Introduction	12 sec	Scrolling "lost data" live feed	Tense, minimal
Problem	10 sec	Split-screen backup comparison	Contemplative
Solution Reveal	10 sec	Logo + provider convergence animation	Building confidence
Demo	23 sec	Screen capture of live download	Upbeat, clear
Trust/Proof	8 sec	"100% Local" badge + migration graphic	Steady, reassuring
Conclusion + CTA	12 sec	Pricing card + end screen	Clean, resolved

Site notes for reference:

Live site:totalrecalls.app

A Guides section already exists and is publicly live, featuring provider-specific export guides for ChatGPT, Claude, Perplexity, Gemini, Grok, DeepSeek, Mistral, and Qwen, plus the "Own your AI chat data" pillar guide.

A Blog section does not yet exist on the site and will need to be built to support the Day 1, Day 5, Day 10, and Day 42 blog posts in the content calendar.

2. Consolidated Launch Plan

Product Snapshot

TotalRecalls is a Windows desktop application that downloads a user's AI conversation history — from ChatGPT, Claude, Perplexity, Gemini, Grok, DeepSeek, Mistral, and Qwen — into a private local folder as Markdown and JSON files. The product runs 100% locally: no cloud upload, no account required, and no session data transmitted to a server.

Pricing Structure

Free Tier:3 providers (ChatGPT, Claude, Perplexity), limited to 5 conversations per download. Designed to let users test the app before buying.

Pro License:One-time purchase of \$24 USD (50% off the standard launch price), unlocking all 8 providers, unlimited downloads, and up to 3 device activations. No subscription, ever.

Positioning

TotalRecalls occupies a category of its own: AI conversation backup, distinct from generic note-taking or cloud-sync tools. The core promise is ownership and permanence — conversations saved as plain files on the user's own drive, immune to session expiry, UI overhauls, or provider-side data loss.

Target Audience

Individual power users of AI assistants who:

Rely on AI conversations for ongoing work (research, coding, writing, planning)

Have already experienced — or fear — losing valuable chat history

Value privacy and want a local-first alternative to cloud-based tools

May use multiple AI providers and want one unified archive

Core Messaging Pillars

Loss aversion:Sessions expire, threads get orphaned by UI changes, downloads fail. The live feed on the homepage dramatizes this risk in real time.

Ownership:Files live on the user's own machine in open formats (Markdown + JSON) — no proprietary lock-in, no account to lose.

Simplicity:A four-step process (Buy → Install → Pick providers → Download) makes the value tangible immediately.

Authenticity:The founder story — a retired investment banker turned independent developer — reinforces trust in a market wary of cloud-based AI tools.

Urgency:The 50%-off launch price of \$24 is time-limited, creating a clear reason to convert Free Tier users to Pro before the window closes.

Launch Sequencing (High Level)

Weeks 1–2: Announce the launch, tell the founder story, and establish the "AI conversation backup" category.

Weeks 2–6: Roll out provider-specific guide spotlights (ChatGPT, Claude, Perplexity, Gemini, Grok, DeepSeek, Mistral) to drive organic search traffic and support SEO/AEO visibility for each provider's export process.

Week 6: Apply urgency messaging to convert warm Free Tier users into Pro buyers before the launch discount ends.

Week 6–7: Close out the guide rollout with the final provider (Qwen).

Supporting Assets

Video:The Video Script and Video Outline support both a primary launch video (featuring the Claude demo walkthrough) and a short-form video strategy for social distribution.

Content:The Headlines set feeds into blog titles, ad headlines, and page hero copy.

Guides:The existing 8 provider guides and the "Own your AI chat data" guide serve as the long-form SEO/AEO backbone referenced throughout the content calendar.

Gaps to Close

Ads and email assets have not yet been developed. These should be prioritized to support the Day 1 launch announcement and the Day 42 urgency/promotion push, where paid amplification and direct email conversion will matter most.

3. Phase-by-Phase Roadmap

Phase 1:Launch & Category Introduction (Days 1–10)

Goal:Announce the product, build trust, and establish the "AI conversation backup" category.

Day

Channel

Content

Links To

1

Blog

Introducing TotalRecalls — launch announcement, framing the problem of vanishing AI conversations, \$24 launch price, Free Tier CTA

Strategy (Campaign Brief messaging), Video (launch video), Ads/Email (pending — should launch alongside this post)

5

Blog

Why I Built TotalRecalls — founder story reinforcing authenticity and trust

Strategy (founder positioning)

10

Blog

Own Your AI Chat Data — category-creation piece, links to the pillar guide

Content (existing "Own your AI chat data" guide)

Video/Ads/Email needed: Launch video should go live Day 1 alongside the announcement post.

Ads and email are not yet built — recommend a launch-announcement email and initial paid social push timed to Day 1.

Phase 2: Provider Guide Rollout (Days 14–38)

Goal: Capture provider-specific search demand and demonstrate breadth across all 8 supported providers.

Day

Provider Spotlight

Key Angle

14

ChatGPT

Official download vs. TotalRecalls' clean local library

18

Claude

Preserving Projects and long threads

22

Perplexity

Preserving research trails before session expiry

26

Gemini

Converting Google Takeout ZIPs into Markdown

30

Grok

Session scanning and referenced X posts

34

DeepSeek

Preserving R1 thinking traces, Free Tier friendly

38

Mistral

UTF-8 fidelity for multilingual archives

Cross-links: Each spotlight should reference the corresponding live guide page (e.g., /guides/export-chatgpt-conversations/) and reinforce the core value proposition established in Phase 1. Short-form video cuts (per the Video Script's short-form strategy) can accompany each spotlight to extend reach on social.

Phase 3: Urgency & Conversion (Days 42–45)

Goal: Convert warm Free Tier users into Pro buyers before the launch discount ends, and close out the guide series.

Day

Content

Purpose

42

Blog: Launch Pricing Ends Soon

Time-sensitive reminder of the \$24 launch price, reiterates Free Tier-to-Pro upgrade path with social proof (files secured, providers supported)

45

Guide Spotlight: Qwen Chat

Closes out the 8-provider guide rollout, clarifies consumer vs. developer API distinction

Ads/Email needed: This phase is the highest-priority gap for paid and email support — a countdown-style email sequence and retargeting ads aimed at Free Tier users would directly reinforce the Day 42 urgency post.

Ongoing Dependencies

Blog section build-out: Required before Day 1 to publish the launch announcement, founder story, category piece, and urgency post.

Ads and email development: Should be prioritized ahead of Phase 1 and Phase 3, where conversion pressure is highest.

Video distribution: The launch video and short-form cuts should be scheduled to align with Phase 1 and reused across Phase 2 guide spotlights for consistency.

Landing Page

Recall every AI conversation, before it's gone for good

TotalRecalls is a Windows app that downloads your ChatGPT, Claude, Perplexity, Gemini, Grok, DeepSeek, Mistral, and Qwen chats into a private local folder — saved forever as Markdown and JSON, with zero cloud upload.

[Buy TotalRecalls — \$24 USD, discounted launch price] [Try the Free Tier]

Every day, someone loses a conversation they needed

2026-08-15 · chatgpt · download failed · thread lost

2026-08-15 · claude · UI revision · 4 threads orphaned

2026-08-14 · perplexity · session expired · research trail gone

2026-08-14 · gemini · Takeout parse error · 2 archives unreadable

2026-08-13 · grok · tab closed · debug session lost

2026-08-13 · chatgpt · 9 months of prompts · no backup

Chat interfaces are not built for permanence. A UI update, a closed tab, or an expired session can wipe out months of your best thinking. Once it's gone, it's gone.

One library. Every provider. Yours forever.

TotalRecalls solves this with a simple idea: your conversations belong on your own drive, not locked inside someone else's platform.

100% local, zero cloud upload. Everything runs on your machine. Your conversations are never sent to a server, and there's no account to lose.

One library for eight providers. ChatGPT, Claude, Perplexity, Gemini, Grok, DeepSeek, Mistral, and Qwen — all downloaded into a single, organized folder instead of eight separate silos.

Files you own forever. Every conversation is saved as plain Markdown and JSON. No proprietary format, no lock-in — just files you can open, search, and back up with anything you already use.

Simple as ABCD

A. Buy once. Checkout via Paddle. One-time \$24 USD, no subscription.

B. Install. Unzip and run the Windows app. Local sign-in only — no account required.

C. Pick your providers. Choose from ChatGPT, Claude, Perplexity, Gemini, Grok, DeepSeek, Mistral, or Qwen.

D. Download. Your chats land as Markdown and JSON files in your local Library folder, ready whenever you need them.

Built for the AI tools you actually use

Most people don't rely on just one AI assistant — they move between several, depending on the task. TotalRecalls covers all eight of the providers you're most likely using:

ChatGPT · Claude · Perplexity · Gemini · Grok · DeepSeek · Mistral · Qwen Chat

Each provider downloads directly into its own folder inside your library, so nothing gets mixed up and everything stays easy to find. More providers are in development.

Watch it work

Watch a real download in action: connecting an account, saving conversations locally, and opening the finished files in Word. It's the same straightforward process for every provider TotalRecalls supports — and your conversations never leave your machine.

[Watch the demo]

Your library travels with you

There's no cloud account to lose and no proprietary format to be trapped in. Your conversations are ordinary files sitting on your own machine — move them, back them up, or open them in another tool whenever you like.

Own your files. Every conversation lives on your disk as Markdown and JSON. No account, no cloud library, no lock-in.

Open with anything. Plain, standard formats you can search, back up, diff, or load into any tool you already use.

Move machines freely. Copy your download folder to a new PC and it just works — no login required.

Never uploaded. Everything runs locally, always.

Migrating to a new computer is as simple as copying the download folder. That's the whole process.

One price. Every conversation. Yours forever.

Try before you buy. The Free Tier lets you test TotalRecalls on your own chats — limited to 3 providers and 5 conversations per download — so you can get comfortable with the app before spending a cent.

When you're ready, a one-time \$24 USD purchase unlocks Pro: all 8 providers, unlimited downloads, and up to 3 device activations. No subscription, ever.

[Buy TotalRecalls — \$24 USD, discounted launch price] [Try it free]

Questions, answered

Which providers does it work with?

Eight: ChatGPT, Claude, Perplexity, Gemini, Grok, DeepSeek, Mistral, and Qwen. One app downloads your conversations from all of them.

What's the refund policy?

We don't run a standard refund policy — we have something better. The Free Tier lets you test the app on your own chats before committing to buy. If you still have a refund request after purchasing, contact us and we'll handle it case-by-case. Your statutory consumer rights always apply and are never excluded.

Is there a subscription?

No. It's a one-time \$24 USD purchase at the discounted launch price. You keep receiving free updates to the core app for the life of the product.

Do I need to create an account?

No. There's no account and no sign-up. Everything is saved locally as files on your own machine.

Is my data uploaded anywhere?

No. TotalRecalls runs 100% locally and never sends your conversations to a server.

[See all questions →]

Stop losing conversations you'll want later

Every day you wait is another chat that could disappear behind a closed tab, an expired session, or a UI update. Build your local library now, while everything's still there to save.

Landing Page

Recall every AI conversation you've ever had

TotalRecalls downloads your ChatGPT, Claude, Perplexity, Gemini, Grok, DeepSeek, Mistral, and Qwen chats into a private local folder — as plain Markdown and JSON files you own forever. No cloud upload. No account. No subscription.

[Try the Free Tier] [Watch Demo]

Available for Windows 10/11 · macOS and Linux in development

Your AI conversations aren't as permanent as you think

Chat platforms weren't built for long-term storage. Sessions expire. Interfaces change overnight. Exports break or lock your data into formats you can't easily read. One day the research thread you relied on, the debugging session that solved a hard problem, or nine months of prompts are just... gone.

2026-08-15 · chatgpt · download failed · thread lost

2026-08-15 · claude · ui revision · 4 threads orphaned

2026-08-14 · perplexity · session expired · research trail gone

2026-08-14 · gemini · takeout parse error · 2 archives unreadable

2026-08-13 · grok · tab closed · debug session lost

2026-08-13 · chatgpt · 9 months of prompts · no backup

This isn't hypothetical. It happens every day, to people who assumed their chat history would just be there when they needed it again.

Built for anyone who lives in multiple AI tools

If you rely on AI assistants for real work, you've probably felt this pain already.

Researchers who need a permanent, searchable record of every source and thread

Writers who draft, revise, and reference ideas across multiple sessions

Developers who solve problems in AI chats and need to find that solution again in six months

Consultants who need a reliable paper trail of client-facing analysis

Anyone juggling more than one AI tool who's tired of having conversations scattered across five different platforms with five different rules

If any of that sounds familiar, TotalRecalls was built with you in mind.

One library. Every provider. Files you actually own.

TotalRecalls pulls your conversations out of eight separate AI platforms and organizes them into a single local folder on your own computer.

100% local — your conversations are never uploaded to a cloud server, ever

No account required — nothing to sign up for, nothing to log into

Eight providers, one folder — ChatGPT, Claude, Perplexity, Gemini, Grok, DeepSeek, Mistral, and Qwen, all downloaded into the same organized library

Open, portable formats — every conversation is saved as plain Markdown and JSON, readable by any tool you already use

One-time purchase — \$24 USD, no subscription, ever

Simple as A, B, C, D

A. Try it free

Download the Free Tier and connect your ChatGPT, Claude, or Perplexity account. No purchase required.

B. Pick your providers

Choose which AI platform to pull from — ChatGPT, Claude, Perplexity, Gemini, Grok, DeepSeek, Mistral, or Qwen.

C. Download

TotalRecalls retrieves your conversations and saves them as Markdown and JSON files.

D. Own your library

Your conversations now live in a private folder on your own machine — searchable, portable, and yours for good.

See it work

Watch a real download, start to finish: choosing a provider, signing in, and saving conversations to a local folder as readable Markdown files.

[Watch Demo]

Demo footage shown using the Windows app. Your real conversations never leave your machine.

Product screenshots show the provider-selection screen, the local library folder organized by AI platform, and a downloaded conversation opened as a formatted Markdown file.

Built by someone who has nothing to gain by cutting corners

I'm the sole developer behind TotalRecalls. Before this, I spent more than 45 years in financial services as an investment banker and venture capitalist. There's no VC funding, no growth team, and no incentive to harvest your data — just one person who saw a real problem and built a tool to solve it.

That also means when you first run TotalRecalls, Windows may show a "Windows protected your PC" SmartScreen warning. That's standard for any new, independently developed app — not a sign of malware. Click More info, then Run anyway, and you're set. As the app builds a track record with Microsoft, this warning will fade.

Your library travels with you

There's no cloud account to lose and no proprietary format to get trapped in. Your conversations are ordinary files, sitting on your own disk.

Own your files — every conversation saved locally, no account or cloud library required

Open with anything — plain Markdown and JSON, searchable, diff-able, and compatible with any tool you already use

Move machines freely — copy the folder to a new PC and it just works, no login needed

Never uploaded — everything runs locally, and your conversations never leave your machine

Migrating to a new computer is as simple as copying one folder.

One price. Every conversation. Yours forever.

Try TotalRecalls free before you spend a cent. The Free Tier lets you test the app on your own real conversations — no risk, no commitment.

Stay in the loop

Not ready to try it yet? Leave your email and we'll let you know when new providers, features, and platforms (macOS and Linux are in development) become available.

[Get product updates]

Questions, answered

Is this actually safe? Why does Windows show a warning?

The "Windows protected your PC" message is standard SmartScreen behavior for any newly released, independently developed app — it's not a sign of malware. Click More info, then Run anyway. Only download TotalRecalls from our official site, totalrecalls.app.

What exactly do I get in the download folder?

Each conversation is saved as a readable Markdown file (and a corresponding JSON file) inside a folder organized by provider — for example, `TotalRecalls\Library\claude\2026-07-28-refactor-plan.md`. You can open these with Notepad, Word, Obsidian, or any text editor.

Is there a subscription?

No. Pro is a one-time \$24 USD purchase at a discounted launch price, with no recurring billing. You keep receiving free updates to the core app for the life of the product.

Do I need to create an account?

No. There's no sign-up and no cloud account. Everything is saved locally as files on your own machine.

What's the refund policy?

We don't run a standard refund policy — the Free Tier exists so you can fully test the app before paying. If you still have concerns after trying it, contact us and we'll handle it case by case. Your statutory consumer rights always apply.

Which platforms are supported?

Windows 10 and 11 today. macOS and Linux versions are currently in development.

Still curious? [See all questions →]

TotalRecalls Founder Story Blog

Why I Built TotalRecalls

I spent more than 45 years in financial services — most of it as an investment banker and venture capitalist. I've built portfolios, sat on boards, and watched more startups succeed and fail than I can count. What I never expected was that, in retirement, I'd become a solo software developer. Yet here I am, and TotalRecalls is the reason.

Let me tell you how it happened.

The conversation I couldn't get back

A while ago, I was deep into a research project using AI assistants. Over several weeks, I'd built up a thread that was genuinely valuable — careful questions, refined answers, a line of reasoning I'd shaped through dozens of exchanges. It was, in a real sense, my thinking made visible.

Then one day I went back to find it, and it was gone.

A session had expired. An interface had changed. I honestly still don't know exactly which. What I do know is that weeks of work vanished with no warning and no way to recover it. There was no undo button, no support line, no backup sitting quietly on a server somewhere waiting for me.

I sat there feeling something I hadn't felt in years: genuinely foolish. I'd spent a career advising people to protect their assets, and I'd let some of my most useful work live entirely inside tools I didn't control.

I wasn't the only one

Once I started paying attention, I saw the pattern everywhere. Friends losing debugging sessions when a tab closed. Colleagues who couldn't find a conversation from three months back because the history had quietly rolled off. People juggling ChatGPT, Claude, Perplexity, and three others, with their best ideas scattered across accounts, each with its own login and its own rules.

Chat platforms simply weren't built to be permanent archives. They're built to answer you right now — not to guarantee you can find that answer next year. That's not a flaw in any one company. It's just the nature of the tools.

But it struck me as a real problem hiding in plain sight. We back up our photos. We keep copies of tax documents. Yet our AI conversations — increasingly a record of how we research, write, and solve problems — were living somewhere we didn't own, with no copy anywhere else.

Why I decided to build it myself

I'm not a software company. For most of my life I couldn't have written a line of production code. But AI tools have matured to the point where a motivated individual can actually build something useful. So I decided to try.

Two principles guided every decision from day one.

Local-first. Your conversations belong on your own machine, not inside another cloud service you have to trust. TotalRecalls downloads your chats from eight providers — ChatGPT, Claude, Perplexity, Gemini, Grok, DeepSeek, Mistral, and Qwen — into a folder on your own computer. Everything runs locally. Your conversations never touch a server of mine, because there is no server of mine.

Privacy-first. There's no account to create and no sign-up. I don't collect your data, host your chats, or transmit your session tokens. I built it this way on purpose. After a career watching what happens when companies treat customer data as an asset to be mined, I wanted to build something that simply couldn't do that.

Your files land as plain Markdown and JSON — open, readable formats you can search, back up, or open in any tool you already use. No proprietary lock-in. If you ever stop using TotalRecalls, your library still works. That mattered to me.

Why one price, not a subscription

This one is personal too.

I'm tired of subscriptions. I suspect you are as well. The idea that you should pay every month, forever, to keep access to your own conversations struck me as exactly the wrong model for a tool about ownership.

So TotalRecalls Pro is a one-time \$24 purchase — a discounted launch price, 50% off the regular rate. Not \$24 a month. Not a fee you'll forget to cancel. You pay once, the license is yours, and you keep getting free updates to the core app for the life of the product.

I'd rather earn your trust with a fair, honest deal than lock you into a recurring bill. There's no outside funding pushing me toward growth-at-all-costs pricing. It's just me, and I get to build the thing the way I think it should be built.

Try it before you spend a cent

I didn't want you to take my word for any of this, so there's a Free Tier. Download the app and test it on your own real conversations — no purchase, no commitment. It covers three providers (ChatGPT, Claude, and Perplexity) with up to five conversations per download. That's enough to see exactly how it works with your own chats before you decide anything.

If it earns a place in how you work, Pro unlocks all eight providers with unlimited downloads for that one-time \$24.

I built TotalRecalls because I lost something I couldn't get back, and I didn't want that to keep happening — to me or to anyone else. If you've ever felt that same sinking feeling of a conversation gone for good, I think you'll understand exactly why it exists.

Try the Free Tier today at totalrecalls.app, and start keeping the conversations you'll want later.

TotalRecalls Launch Pricing Urgency Blog

Launch Pricing Ends Soon

The \$24 launch price for TotalRecalls Pro is ending. If you've been testing the Free Tier and thinking about the upgrade, this is your window — and it's closing.

We wanted to give you a clear heads-up rather than let the deadline sneak past you. So here's exactly where things stand, what you get, and why now is the moment to decide.

The deadline, plainly

Pro is currently \$24 USD — our discounted launch price, 50% off the regular rate. That price won't last. Once the launch window closes, the price goes up, and this one-time deal is gone.

No fake countdowns, no "act now or lose everything" theatrics. Just the honest truth: the discount has an end date, and it's almost here. If \$24 makes sense for you, locking it in today saves you real money.

What you've already seen in the Free Tier

You've been running TotalRecalls on your own conversations. You know it works. You've watched your chats land as clean Markdown and JSON files in a folder you control — no cloud, no account, no upload.

The Free Tier gave you a real taste: 3 providers (ChatGPT, Claude, and Perplexity) and up to 5 conversations per download. Enough to prove the tool does what it says.

Pro simply removes the limits.

What Pro unlocks

One purchase, and the guardrails come off:

All 8 providers — ChatGPT, Claude, Perplexity, Gemini, Grok, DeepSeek, Mistral, and Qwen, in one local library

Unlimited downloads — no cap on conversations, no cap on how often you back up

Up to 3 device activations — cover your desktop, laptop, and one more machine

Free updates to the core app for life — the tool keeps working as providers change their sites

That's the whole difference. Same local-first approach, same private files on your own drive — just applied to every conversation across every provider you use.

One price. Not one price a month.

Here's the part worth sitting with for a second.

Most tools in this space would charge you monthly, forever, just to keep access to your own data. That never sat right with us. A tool about owning your conversations shouldn't rent them back to you.

So Pro is \$24, one time. Not \$24 a month. Not a fee you'll forget to cancel. You pay once, the license is yours, and you keep getting free updates to the core app for as long as the product exists.

Think about what you'd spend on a single month of most subscriptions. Pro costs about that — once — and then it's done.

Why upgrade before the window closes

You've already done the hard part: you tried it, and it earned a place in how you work. The only thing left is deciding whether to lock in the launch price or pay more later for the exact same thing.

Every conversation you have from here forward is another one worth keeping. Waiting doesn't make the tool cheaper — it makes it more expensive, once the discount ends.

If you were always going to upgrade, upgrading now is simply the smarter version of that decision.

Lock in your \$24 launch price

The upgrade takes a minute. Your Free Tier setup stays exactly as it is — Pro just widens what you can download and lifts the limits you've been bumping into.

Grab Pro at the launch price before it ends:

Buy TotalRecalls Pro — \$24 USD

One payment. Every provider. Every conversation. Yours for good — and no subscription, ever.

TotalRecalls Why I Built Blog

Why I Built TotalRecalls

I spent more than 45 years in financial services, most of it as an investment banker and venture capitalist. I advised companies, sat on boards, and watched a good number of startups rise and fall. The one thing I never pictured myself doing in retirement was writing software. Yet here I am, and a lost conversation is the reason why.

Let me explain.

The conversation I couldn't get back

Not long ago, I was deep into a research project with an AI assistant. Over several weeks I'd built up a thread that genuinely mattered — sharp questions, refined answers, a whole line of reasoning I'd shaped through dozens of back-and-forth exchanges. It was, in a real sense, my thinking laid out in front of me.

Then I went looking for it one morning, and it was gone.

A session had expired. Or maybe the interface had changed. Honestly, I still don't know which. What I do know is that weeks of careful work vanished with no warning and no way to get it back. There was no undo button, no support line, no quiet backup sitting on a server somewhere waiting for me to ask.

I sat there feeling something I hadn't felt in a long time: plain foolish. I'd spent an entire career telling people to protect their assets. And I'd let some of my most useful work live entirely inside a tool I didn't control.

It turned out I wasn't alone

Once I started paying attention, I saw the same story everywhere. A friend lost a debugging session when a tab closed at the wrong moment. A colleague couldn't find a conversation from three months earlier because the history had quietly rolled off. People running ChatGPT, Claude, Perplexity, and three or four others, with their best ideas scattered across separate accounts — each with its own login, its own rules, and its own way of losing things.

Chat platforms simply weren't built to be permanent archives. They're built to answer you right now, not to promise you can find that answer next year. That isn't a failing of any one company. It's just what these tools are.

But it struck me as a real problem hiding in plain sight. We back up our photos. We keep copies of our tax records. Somehow our AI conversations — more and more, a record of how we research, write, and solve problems — were living somewhere we didn't own, with no copy anywhere else.

Why I decided to build it myself

I'm not a software company. For most of my life I couldn't have written a working line of code. But AI tools have matured to the point where a motivated person can actually build something useful. So I decided to find out if I was that person.

Two principles shaped every choice I made.

Local-first. Your conversations belong on your own machine, not inside another cloud service you're forced to trust. TotalRecalls downloads your chats from eight providers — ChatGPT, Claude, Perplexity, Gemini, Grok, DeepSeek, Mistral, and Qwen — straight into a folder on your own computer. Everything runs locally. Your conversations never touch a server of mine, because there is no server of mine.

Privacy-first. There's no account to create and no sign-up. I don't collect your data, host your chats, or transmit your session tokens. I built it that way on purpose. After a career spent watching what happens when companies treat customer data as an asset to be mined, I wanted to make something that simply couldn't do that.

Your files land as plain Markdown and JSON — open, readable formats you can search, back up, or open in any tool you already use. No proprietary lock-in. If you ever walk away from TotalRecalls, your library still works. That mattered to me more than almost anything else.

Why one price, not a subscription

This part is personal too. I'm tired of subscriptions, and I suspect you are as well. The notion that you should pay every month, forever, just to keep access to your own conversations struck me as exactly the wrong model for a tool that's supposed to be about ownership.

So Pro is a one-time \$24 — a discounted launch price, half off the regular rate. Not \$24 a month. Not a fee you'll forget to cancel. You pay once, the license is yours, and you keep getting free updates to the core app for the life of the product.

I'd rather earn your trust with a fair, honest deal than trap you in a recurring bill. There's no outside funding pushing me toward growth at any cost. It's just me, which means I get to build the thing the way I believe it should be built.

Try it before you spend anything

I didn't want you to take my word for any of this, so there's a Free Tier. Download the app and run it on your own real conversations — no purchase, no commitment. It covers three providers with up to five conversations per download, which is plenty to see how it works before you decide a single thing.

I built TotalRecalls because I lost something I couldn't get back, and I didn't want that to keep happening — to me or to anyone else. If you've ever felt that same sinking feeling of a conversation gone for good, I think you'll understand exactly why it exists.

Try the Free Tier today at totalrecalls.app, and start keeping the conversations you'll want later.

— The founder, TotalRecalls

TotalRecalls Missing Items Checklist

TotalRecalls Missing Items Checklist

Your single scannable reference for everything still open across the launch. Some items were created since the earlier planning rounds — those show as  so you know what's already handled. Everything else needs work, ranked by priority so you know what to touch first.

Status key:  Complete ·  Partial ·  Open

Priority key: P1 Critical · P2 High · P3 Medium · P4 Low

Product anchor: TotalRecalls downloads AI conversations from 8 providers (ChatGPT, Claude, Perplexity, Gemini, Grok, DeepSeek, Mistral, Qwen) into local Markdown/JSON files. Pro is a one-time \$24, with a Free Tier to try first.

Section 1: Marketing Plan Gaps

1.1 Founder story blog

Status:  Complete

Priority: P2 High

What's still needed: The dedicated "Why I Built TotalRecalls" post now exists. Only the operational wrap remains — meta title/description, and slotting it into Day 5 of the launch sequence.

Next action: Load it into the blog, add meta fields, and schedule for Day 5.

1.2 Urgency pricing blog

Status:  Complete

Priority: P2 High

What's still needed: The "Launch Pricing Ends Soon" post now exists. It needs a confirmed end-date reference and placement at Day 42.

Next action:Finalize the deadline wording, add meta fields, and schedule for Day 42.

1.3 Organic social program

Status:  Partial

Priority:P1 Critical

What's still needed: You have launch-day posts and a posting checklist, but not a full program. Missing: a weekly cadence across the whole window, provider-spotlight posts tied to each guide, a founder-led series, objection-handling posts, urgency-phase coverage, and per-platform repurposing rules.

Next action:Build a phase-aligned social calendar mapping posts to each launch day, then draft the provider-spotlight and founder series.

1.4 Audience / persona strategy

Status: ☐ Open

Priority:P2 High

What's still needed: A clear persona framework — primary and secondary personas (developers, researchers, writers, consultants, multi-provider users, privacy-minded professionals), with messaging angles, channel emphasis, and best-fit asset types for each.

Next action:Define 3–4 core personas and map each to its strongest message, channel, and asset.

1.5 Post-launch retention plan

Status: ☐ Open

Priority:P3 Medium

What's still needed: Everything after purchase or after the launch window. Missing: onboarding nurture, first-download activation prompts, referral/review/testimonial generation, and update communications for new providers.

Next action:Draft a post-purchase onboarding sequence and a simple review/testimonial request flow.

1.6 Editorial architecture

Status:  Partial

Priority:P3 Medium

What's still needed: You have posts and a content calendar, but not the system behind them. Missing: which pages are conversion vs. SEO vs. credibility, an internal linking plan across blog/guides/homepage/pricing/FAQ, and a post-launch update cadence.

Next action:Classify each content piece by role and map the internal linking paths between them.

Section 2:Implementation Plan Gaps

2.1 Master execution calendar

Status:  Complete

Priority:P1 Critical

What's still needed: The master implementation plan now includes the day-by-day execution table. It needs real owners filled into every row and daily status updates.

Next action:Assign an owner to each row and begin updating statuses every morning.

2.2 Ownership map

Status: ☐ Open

Priority:P1 Critical

What's still needed: Named responsibility for each function — publishing blogs, posting social, launching ads, email setup, analytics, comment replies, website updates, and timing sync. Even solo, assign functional ownership so nothing slips.

Next action:Fill the "Owner" columns in the execution table with real names or functional roles.

2.3 Infrastructure readiness

Status:  Partial

Priority:P1 Critical

What's still needed: The readiness checklist exists in the implementation plan, but items are unverified. Confirm: blog live, analytics/UTMs firing, email capture connected, automations tested, pixels verified, buy/download links QA'd, support path ready, SmartScreen response staged.

Next action:Walk the checklist and physically test each item; hold the launch until every box is checked.

2.4 KPI thresholds and decision rules

Status:  Partial

Priority:P2 High

What's still needed: You have per-phase metrics, but not operating thresholds. Missing: target CTR by channel, free-tier download volume, free-to-Pro conversion rate, CAC/CPA ranges, and "if X then Y" rules for pausing, scaling, or rewriting.

Next action:Set numeric targets and trigger rules for each phase and channel.

2.5 Retargeting mechanics

Status:  Complete

Priority:P2 High

What's still needed: The implementation plan defines audiences, exclusions, and rotation. Execution remains: install pixels, build the pools from Day 1, and confirm the daily buyer-exclusion sync works.

Next action:Stand up the retargeting audiences and verify buyer suppression before Phase 3.

2.6 Lifecycle automation

Status:  Complete

Priority:P1 Critical

What's still needed: The bucket logic (Prospect → Free-Tier → Buyer), triggers, and suppression rules are documented. They need to be wired and tested in your email platform.

Next action:Build each automation, then test the tag-on-action and nightly buyer-sync end to end.

2.7 Asset-to-channel mapping

Status:  Complete

Priority:P2 High

What's still needed: The final-vs-backup map exists in the implementation plan. Execution remains: apply the [BACKUP]/[DRAFT] prefixes on the canvas and confirm only approved assets feed the calendar.

Next action:Rename non-final assets and deprecate the untitled documents.

2.8 Source-of-truth cleanup

Status:  Partial

Priority:P2 High

What's still needed: With 70+ overlapping assets on the canvas, you need one approved version per slot, clear naming conventions, and a deprecated pile. The mapping identifies finals, but the canvas itself isn't yet cleaned.

Next action:Archive or relabel duplicates so each slot has exactly one live, approved asset.

2.9 Testing roadmap

Status:  Complete

Priority:P3 Medium

What's still needed: The testing table (headlines, CTAs, landing variants, subject lines, ad creatives, urgency framing) is defined. It needs a shared results log and someone running the tests.

Next action:Set up the results sheet and schedule the first Phase 1 headline and CTA tests.

2.10 Support workflow

Status:  Complete

Priority:P2 High

What's still needed: The launch-week monitoring cadence, canned replies, and FAQ escalation ladder are written. Assign a monitor and load the canned replies into your support inbox.

Next action:Save the canned replies as templates and assign monitoring windows for launch week.

Priority Rollup

Work top to bottom. Clear the P1s before anything else — they gate the launch.

P1 — Critical (do first)

- ☐ Ownership map — assign a name to every task
- ☐ Infrastructure readiness — test and confirm every item
- ☐ Organic social program — build the phase-aligned calendar
- ☒ Master execution calendar — add owners, update daily
- ☒ Lifecycle automation — wire and test the flows

P2 — High

- ☐ Audience / persona strategy
- ☐ KPI thresholds and decision rules
- ☐ Source-of-truth cleanup
- ☒ Founder story blog — schedule for Day 5
- ☒ Urgency pricing blog — schedule for Day 42
- ☒ Retargeting mechanics — build pools, verify sync
- ☒ Asset-to-channel mapping — relabel on canvas
- ☒ Support workflow — assign monitor, load replies

P3 — Medium

- ☐ Post-launch retention plan
- ☐ Editorial architecture
- ☒ Testing roadmap — set up results log

P4 — Low

None outstanding at this time.

How to use this checklist

Start with the P1 rollup. These block launch day — clear them before touching anything lower.

Turn ☐ and ☐ items into scheduled tasks with an owner and a date.

Re-check statuses daily during the launch window and move items to ☒ as you close them.

Treat infrastructure readiness as a gate. If any of its items is unchecked, hold the launch.

Once every P1 shows ☒ and the remaining items are scheduled, your launch shifts from a folder of content to a plan you can actually run.

TotalRecalls Master Implementation Plan

TotalRecalls Master Implementation Plan

This is your live command sheet. Where strategy tells you what to say and the gap checklist tells you what's open, this document tells you how to run the launch — every asset, on every channel, on every day, with a clear owner, CTA, dependency, and status. Treat it as the single operational source of truth for the 45-day launch window.

Fill the Owner columns with real names (or your own, if solo). Update Status daily. Everything points back to one product truth: TotalRecalls downloads your AI conversations from eight providers into local Markdown and JSON files, for a one-time \$24 Pro price, with a Free Tier so people can try before they buy.

Status key: ☐ Not started ·  In progress ·  Done · ☐ Blocked

Own Your AI Chat Data (live guide)

Urgency post

TotalRecalls Launch Pricing Urgency Blog

Governance rule: Rename every non-final asset with a [BACKUP] or [DRAFT] prefix. Only the approved final feeds the execution table. Deprecate untitled documents.

Section takeaway: One approved asset per slot. Everything else is clearly labeled and out of the shipping path.

3. Lifecycle automation logic

Three buckets carry the campaign. Every contact sits in exactly one, and actions move them between buckets automatically.

Bucket definitions and triggers

Bucket	Enters when	Primary CTA	Receives
A — Prospect	Submits any signup form; no download	Try the Free Tier	Welcome sequence, value nurture, guide roundups
B — Free-Tier user	Free-tier download event fires	Upgrade to Pro — \$24	Upgrade sequence, soft Pro nudges
C — Buyer	Purchase event fires	None commercial	Onboarding, tips, feature/provider updates

Movement and suppression rules

Rule

Rule	Logic
Prospect → Free-Tier	Download event applies "free-tier" tag; remove from prospect acquisition drip
Free-Tier → Buyer	Purchase event applies "buyer" tag; exit all upgrade + urgency flows immediately
Prospect → Buyer (direct)	Purchase event applies "buyer" tag; skip free-tier flows
Buyer suppression	Exclude Bucket C from every sell, upgrade, and urgency send — no exceptions
Mid-sequence purchase	Nightly sync removes new buyers from active urgency emails before the next send
Inactive free-tier	No download activity in 14 days → "activation reminder" branch (how-to, not sell)
Unsubscribe	Global suppression across all flows; keep only transactional/license emails

Sequence entry/exit map

Welcome sequence: Entry = new signup. Exit = download (→ upgrade flow) or purchase (→ onboarding).

Value nurture:Entry = welcome sequence complete, still a prospect. Exit = download or purchase.

Upgrade sequence:Entry = free-tier tag. Exit = purchase or end of sequence (→ long-term nurture).

Urgency sequence:Entry = Day 42 for Buckets A + B. Exit = purchase or campaign end. Buyers hard-excluded.

Onboarding:Entry = purchase. No commercial CTA; focus on activation and updates.

Section takeaway:Tag on action, move on action, and suppress buyers everywhere. The nightly buyer sync is the single most important automation to get right.

4. Retargeting mechanics

Phase 1–2 builds the pools; Phase 3 converts them. Set these up early so audiences are large enough by Day 42.

Audience definitions

Audience	Definition	Window
Pricing viewers	Visited pricing or buy page, no purchase	30 days
Download-page visitors	Visited download page, no confirmed free-tier	30 days
Free-tier users	Confirmed free-tier tag, no Pro	45 days
Video viewers	Watched 25%+ of launch or spotlight video	30 days
Guide readers	Read any Phase 2 spotlight/guide page	30 days

Exclusions (critical)

Suppress all buyers (Bucket C) from every retargeting ad set.

Sync the buyer tag to each ad platform daily so purchasers stop seeing sell ads within 24 hours.

Exclude anyone who converts mid-campaign from active urgency ad sets.

Creative rotation rules

Phase

Creative focus

Rotation

Phase 1–2 (pool-building)

Soft:loss aversion, ownership, "try free"

Rotate 2–3 creatives; refresh every 7 days

Phase 3 (conversion)

Hard: deadline + one-time-vs-subscription math

3-creative rotation; swap the fatigued unit at CTR drop >20%

Free-tier specific

"5 locked providers Pro unlocks"

Serve only to Bucket B

Activation thresholds: Don't launch a retargeting set until its audience clears platform minimums (roughly 1,000+ users). If a pool is thin by Day 40, consolidate audiences to reach size.

Section takeaway: Build pools from Day 1, cap frequency, and let the daily buyer sync protect your paying customers from sell ads.

5. Infrastructure readiness checklist

This is your pre-launch gate. If any item is unchecked, hold the launch.

Blog and website

- ☐ Blog section live, template tested, headings and CTA slot working
- ☐ Meta title/description fields functional
- ☐ Day 1 announcement post loaded and scheduled
- ☐ Homepage rewrite deployed and reviewed on mobile + desktop

Analytics and UTMs

- ☐ Analytics installed and firing on all key pages
- ☐ UTM convention documented (utm_source / utm_medium / utm_campaign=launch)
- ☐ Free-tier download event tracked
- ☐ Purchase event tracked

Email capture and platform

- ☐ Signup forms live on homepage, guide pages, pricing/buy pages
- ☐ "Notify me" capture for macOS/Linux and new providers
- ☐ Email platform connected with tags and automations
- ☐ Welcome sequence test-fires on new signup

Ad pixels

- ☐ Pixels installed on homepage, pricing, download pages
- ☐ Conversion events mapped (download, purchase)
- ☐ Ad accounts verified and billing active

Buy/download links QA

- ☐ Buy link completes a real test purchase
- ☐ Free-tier download link delivers the correct ZIP
- ☐ License key delivery email confirmed
- ☐ All CTAs across site point to correct destinations

Support workflow

- ☐ Support inbox monitored, owner assigned
- ☐ SmartScreen canned reply saved
- ☐ FAQ/help path reachable from every page
- ☐ Escalation path defined for edge-case issues

Section takeaway:No blog, no tracking, no working buy link means no launch. Clear every box before Day 1.

6. Launch-week support and objection-handling workflow

A new downloadable Windows tool triggers predictable questions. Handle them fast and consistently.

Monitoring cadence (Days 1–7)

Window	Action	Owner
First 4 hours	Check all platforms + support inbox every 30 min	_____
Hours 4–24	Check every 1–2 hours	_____
Days 2–7	Check morning, midday, evening	_____

Canned replies

SmartScreen warning ("Windows protected your PC"):

Thanks for flagging this! That message is standard SmartScreen behavior for any newly released, independently developed app — it's not a sign of malware. Click More info, then Run anyway to continue. Only download from totalrecalls.app. As the app builds reputation with Microsoft, the warning fades. Any trouble, email support@totalrecalls.app.

"Is my data safe / uploaded anywhere?":

Great question. TotalRecalls runs 100% locally — your conversations are saved to a folder on your own machine as Markdown and JSON, and nothing is ever uploaded to a server. There's no account and no sign-up. More detail on our Privacy Policy.

"Is this a subscription?":

No subscription, ever. Pro is a one-time \$24 (discounted launch price), and you keep free updates to the core app for life. There's also a Free Tier so you can test it first.

"Does it work on Mac / mobile?":

Not yet — Windows 10/11 today. macOS and Linux versions are in development. Drop your email on our site and we'll notify you when they land.

FAQ escalation process

Tier 1 — Canned reply. Covered above? Respond with the saved reply.

Tier 2 — Personalized. New but simple? Answer directly, then log it.

Tier 3 — Escalate. Bug or edge case? Route to the developer, set expectation on timing.

Feed the loop. Any question asked 3+ times → add to the live FAQ and consider a Day 2–3 social FAQ post.

Section takeaway:Speed and consistency build trust for a new app. Pre-written replies and a clear escalation ladder keep launch week calm.

7. Testing roadmap

Test one variable at a time, give each test enough traffic to matter, and roll winners into the approved assets.

Element	What to test	How	Success metric	When
Headlines	Loss-aversion vs. ownership framing	A/B on homepage hero + top ads	Click-through to free download	Phase 1
CTAs	"Try the Free Tier" vs. "Download free"	Button-copy A/B on homepage	Download conversion rate	Phase 1
Landing variants	Homepage rewrite vs. control section order	Split traffic 50/50	Free-tier downloads per visit	Phase 1–2
Email subject lines	Curiosity vs. direct-benefit	A/B on each broadcast	Open rate	Every send
Ad creatives	Static graphic vs. short video	Per-platform creative A/B	Cost per free download	Phase 1–2
Urgency framing	Deadline-led vs. value-led	A/B on Phase 3 ads + emails	Purchase conversion rate	Phase 3

Testing rules

Change one variable per test — never headline and image together.

Let each test run to a meaningful sample before calling it; don't stop early on noise.

Log every result in a shared sheet; promote winners into the approved asset for that slot.

Kill any ad creative when CTR drops more than 20% below its cohort.

Section takeaway: Small, disciplined tests compound. Feed every winner back into your approved assets so quality climbs across the whole launch.

How to run this document

Assign owners to every row

Landing Page

Trust, Built Differently

Since TotalRecalls is newly launched, you can build trust through elements other than customer reviews. Here are social proof ideas suited to a solo-built, privacy-first utility at this stage:

Try-Before-You-Buy as Proof

Your Free Tier is your strongest trust signal right now. Make it impossible to miss.

"No credit card, no account, no catch" messaging directly under the CTA

A visual comparison table showing exactly what Free unlocks (3 providers, 5 conversations) versus Pro, so visitors see there's nothing to lose by trying first

Language like "Download it, test it on your own conversations, decide for yourself" to reinforce that skepticism is welcome

Founder Credibility

With no user base yet, your own background becomes the proof.

A short "Why I built this" section introducing yourself and your 45+ years in investment banking and venture capital — signaling this is built by someone who understands data privacy, security, and long-term thinking, not a fly-by-night side project

A line such as "Built by a financial services veteran who takes data privacy seriously" to connect your professional rigor to the product's local-first promise

Radical Transparency as Trust

When you don't have testimonials, showing your work builds credibility instead.

"100% local, verifiable" language: explain simply how conversations never leave the machine, and invite technical users to check network activity themselves

Open file formats (Markdown/JSON) framed as a trust point: "Your data isn't locked in a black box — open the files yourself, anytime"

A visible changelog or "lifetime free updates" commitment, showing the app is actively maintained rather than abandoned after launch

Early Adopter Incentives

Turn your first users into future social proof.

A launch pricing badge ("24 one-time — early access price") that signals momentum and urgency without requiring existing reviews

An invitation for early users to share feedback in exchange for recognition (e.g., a "Founding Users" mention or feature request priority), seeding future testimonials

A simple feedback or review request built into the app post-download, so real testimonials start accumulating from day one

Borrowed Trust Signals

In the absence of customer quotes, lean on credibility markers you can claim immediately.

Logos or mentions of the 8 supported AI providers (ChatGPT, Claude, Perplexity, Gemini, Grok, DeepSeek, Mistral, Qwen) to visually establish scope and legitimacy

A "Works entirely offline — no servers, no subscriptions, no data leaves your device" callout, positioned as a verifiable technical claim rather than a marketing promise

If available, a link to your privacy policy or a short technical explainer page, letting cautious buyers self-verify before purchasing

20%

Hi, how can I help you today?

We are launching an application (TotalRecalls) sold as a one-time basis on its website to the general public of all ages. TotalRecalls allow a user to download his/her own conversations from the Top 8 largest AI model providers: ChatGPT, Claude, Gemini, Grok, Perplexity, Mistral, Qwen, and Deepseek. This app has become necessary as AI model providers have made it difficult, if not impossible, to access them.

Retrieved IQ Context · Configured IQ with 1 item

That's a strong product foundation.

Here's a sharper, market-ready positioning draft based on what you shared:

Core positioning

TotalRecalls is a desktop app that lets people download and keep their own AI conversations from the top AI platforms in one private, local library.

Refined product description

TotalRecalls is a Windows desktop application sold directly on its website on a one-time purchase basis. It enables everyday users to download, save, and organize their own conversations from eight major AI providers: ChatGPT, Claude, Gemini, Grok, Perplexity, Mistral, Qwen, and DeepSeek.

As AI tools become more important in daily life, many users are discovering that their conversation history is harder to access, export, preserve, or reuse than expected. TotalRecalls solves that problem by giving users a simple way to create a permanent local archive of their AI chats in standard file formats they control.

With TotalRecalls, users can:

Download conversations from multiple AI providers

Store them locally on their own computer

Keep records in accessible formats

Reduce dependence on changing interfaces or limited export options

Build a personal archive they own and can revisit anytime

Short version

TotalRecalls helps people take back ownership of their AI conversation history. It downloads chats from 8 major AI platforms and saves them locally, so users are not locked into provider interfaces or at risk of losing important conversations.

Value proposition

Own your AI chat history.

TotalRecalls gives users a simple, private way to preserve conversations from the world's leading AI tools in one place.

Tagline options

Own your AI conversations

Download your AI chats. Keep them forever.

Your AI history, saved locally

One app for all your AI conversations

Never lose an important AI chat again

Messaging angle

Your strongest marketing themes appear to be:

Ownership

Users should control the conversations they created.

Access

Important chats should not be trapped behind changing interfaces.

Preservation

Valuable prompts, research, ideas, and workflows should not disappear.

Privacy

Local storage feels safer and more user-controlled.

Convenience

One app for multiple AI providers is much easier than managing each separately.

A more polished founder-style paragraph

TotalRecalls was created to solve a growing problem: as people rely more on AI tools for work, learning, and personal projects, their conversations are becoming valuable digital records. Yet many AI providers make those records difficult to access, export, or preserve in a practical way.

TotalRecalls gives users a simple way to download and keep their own conversations from the leading AI platforms, all in one place, under their own control.

If you want, I can turn this into any of these next:

a homepage hero section

a press release

a 1-paragraph business description

a full landing page copy draft

a set of ad headlines and taglines

Draft a homepage hero section copy for TotalRecalls

The content has been generated successfully.

Multi-channel Campaign

Reach and resonate with audiences through an integrated marketing approach

Content generated

Multi-channel Campaign

I created a full multi-channel campaign asset, and it includes a homepage hero section for TotalRecalls along with supporting campaign copy across email, ads, social, and blog content.

add the following themes to the ad campaign: 1. "you backup your files, why don't you back your ai conversations. 2. "protect your conversations while you can". 3. "trying to get you conversations from ai providers. Good luck!" 4. "this product came from my inability at getting my ai conversations from those big ai providers"

Multi-channel Campaign

I'll update the ad campaign with those four new messaging themes.

Multi-channel Campaign

Done — I updated the campaign asset to weave in those four themes across the ad messaging, giving the campaign a stronger angle around backup habits, urgency, provider friction, and founder-origin authenticity.

Map each new theme to specific channels

Multi-channel Campaign

Here's a clean channel map for the four new themes, based on where each angle is likely to perform best.

1) "You backup your files, why don't you back up your AI conversations?"

Best for:

Search Ads

Meta Ads

Facebook Posts/Ads

Homepage hero/subhero

Email subject lines / hooks

Why it fits:

This is the most universally understandable theme. It uses an existing habit people already believe in—backing up files—and extends it naturally to AI chats. It's simple, memorable, and broad enough for the general public.

Best use by channel:

Search Ads:strong headline angle

Meta/Facebook:strong thumb-stopping rhetorical question

Homepage:strong framing statement near the top

Email:strong opening line for awareness or conversion emails

Example role:

Top-of-funnel awareness and problem recognition.

2) “Protect your conversations while you can”

Best for:

Meta Ads

X Ads

Homepage hero

Retargeting ads

Email conversion copy

Why it fits:

This theme introduces urgency. It works best in channels where short, emotionally charged language performs well. It pushes users from “nice to have” into “I should do this now.”

Best use by channel:

Meta Ads:urgency-driven primary text

X Ads:short, punchy, direct

Homepage hero:can work as a headline or supporting line

Retargeting:ideal for nudging people who already know the product

Email:strong CTA framing

Example role:

Mid- to bottom-funnel conversion pressure.

3) “Trying to get your conversations from AI providers? Good luck!”

Best for:

X Ads

LinkedIn Ads

Blog content

Landing page body copy

Search ad descriptions

Why it fits:

This is more pointed and provocative. It highlights the friction and frustration users experience with providers. It's strong where slightly sharper copy is acceptable and where audiences appreciate a contrarian or skeptical tone.

Best use by channel:

X Ads:perfect for punchy, cynical, high-scroll-stop messaging

LinkedIn Ads:works if framed more professionally around workflow friction

Blog:good section header or opening hook

Landing page body:effective in problem/solution sections

Search descriptions:useful if softened slightly

Example role:

Pain amplification and competitive-context framing.

Note:

For broader consumer channels like Facebook or homepage hero, I'd soften this slightly so it feels clever, not abrasive.

4) "This product came from my inability to get my AI conversations from those big AI providers"

Best for:

Founder story

Landing page body copy

Email sequence

Blog post

LinkedIn organic post

Press/interviews

Why it fits:

This is the most personal and credibility-building theme. It humanizes the product and explains why it exists. It's less of an ad hook and more of a trust-builder.

Best use by channel:

Homepage body / founder note: excellent

Email:great for welcome or story-driven nurture emails

Blog:ideal for origin story content

LinkedIn organic:strong for authentic founder-led storytelling

Press/media:useful for background and narrative depth

Example role:

Trust, authenticity, and emotional credibility.

Best channel-theme pairing summary

Search Ads

Best themes:

Theme 1:backup analogy

Theme 3:provider difficulty

Meta Ads

Best themes:

Theme 1:backup habit

Theme 2:urgency/protection

Facebook

Best themes:

Theme 1:easiest for mass audience

Theme 2:emotional urgency

X Ads

Best themes:

Theme 2:urgency

Theme 3:frustration/snark

LinkedIn Ads

Best themes:

Theme 3:workflow friction

Theme 4:founder insight/origin

Homepage Hero

Best themes:

Theme 1:broadest and clearest

Theme 2:urgency support

Homepage Body / Story Section

Best themes:

Theme 3:problem explanation

Theme 4:founder-origin story

Email Campaign

Best themes:

Theme 2:urgency

Theme 4:personal founder story

Theme 1:simple awareness hook

Blog / Long-form Content

Best themes:

Theme 3:problem framing

Theme 4:narrative depth

Recommended usage by funnel stage

Top of funnel

Use:

Theme 1

Theme 3

These help people recognize the problem quickly.

Middle of funnel

Use:

Theme 2

Theme 3

These intensify urgency and clarify why current provider access is unreliable.

Bottom of funnel

Use:

Theme 2

Theme 4

These drive action and reinforce trust.

My recommendation

If you want the strongest overall campaign structure:

Lead with Theme 1 for broad awareness

Use Theme 2 for urgency and conversion

Use Theme 3 in sharper ad and landing-page problem copy

Use Theme 4 in founder-led/story-driven assets

If you want, I can next turn this into a channel-by-channel messaging matrix with:

headline angle

supporting copy angle

CTA angle

best funnel stage for each theme

Create new X ad copy variations for losses

Multi-channel Campaign

I'll create 3 X ad variations focused on loss and loss-aversion for TotalRecalls, each as its own piece for better testing.

The content has been generated successfully.

View configuration

Social Media Ad

Boost engagement and conversions with impactful Facebook and Instagram ad copy

Content generated

Social Media Ad

I created 3 new loss-focused ad variations for X, each leaning into a different angle: backup behavior, provider friction, and personal stakes from losing valuable conversations.

add that the price is a special one-time 50% OFF discount and may not last too long.

Social Media Ad

I'll update the ad copy to add the limited-time 50% off one-time pricing message.

Social Media Ad

Done — I updated the ad asset to include the special one-time 50% off pricing angle and the idea that the offer may not be available for long, adding more urgency to the conversion message.

Rewrite Social Media Ad with stronger urgency

Social Media Ad

I'll rewrite the existing social media ad asset with a stronger urgency angle while keeping it conversion-focused.

Social Media Ad

Done — I rewrote the social media ad asset with a stronger urgency-driven tone to make the risk of losing conversations and the limited-time offer feel more immediate.

Rewrite Meta Ads primary text with tighter urgency

Social Media Ad

I'll tighten the urgency in the Meta ad primary text across the current ad asset.

Social Media Ad

Done — I tightened the Meta ad primary text to make the urgency sharper and more immediate while keeping the offer and value prop intact.

Generate 3 new headline options for the Meta ad

TotalRecalls Ad Variation Facebook Post

I'll create 3 headline options for the Meta ad so you have distinct variations to test.

The content has been generated successfully.

View configuration

Headlines

Generate compelling, SEO-friendly headlines to entice audiences and drive web traffic

Content generated

Headlines

I created 3 new Meta ad headline options with a stronger mix of urgency, loss aversion, and discounted-offer pressure for testing.

We got deep into advertisement but we should have a more broad approach to the marketing of a market launch. Please generate a comprehensive marketing plan that will serve as a guide as we get more granular.

Headlines

I'll create a comprehensive marketing plan for the TotalRecalls market launch to use as the strategic guide before we go more granular.

The content has been generated successfully.

View configuration

Campaign Brief

Draft a comprehensive plan with goals and deliverables for a marketing campaign

Content generated

Campaign Brief

I created a comprehensive launch marketing plan asset that gives you a broader strategic guide for TotalRecalls, including objectives, audience, messaging pillars, channel strategy, deliverables, and a phased rollout timeline you can now use to drive more detailed workstreams.

Any reason for not including a short YouTube video. What about using TikTok and Instagram?

Yes — there are good reasons to include short-form video, and I'd actually recommend it for this launch.

The earlier plan likely leaned heavily on channels that convert more directly for a utility product like TotalRecalls, but that doesn't mean YouTube Shorts, TikTok, and Instagram Reels should be left out. It just means they should play a specific role in the launch rather than become the whole strategy.

Short answer

You should consider:

A short YouTube video

YouTube Shorts

TikTok

Instagram Reels

But use them primarily for:

problem awareness

product demonstration

trust-building

retargeting support

founder-led storytelling

—not as the only conversion engine.

Why short video makes sense for TotalRecalls

1. The product is easy to “get” when seen

TotalRecalls has a visual workflow:

choose provider

connect

download

see files appear locally

That is much more compelling in video than in static copy alone. A short video can make the product feel:

real

simple

trustworthy

immediate

For a new product, especially one asking people to install software, seeing it work reduces skepticism.

2. The pain is emotional and relatable

“Lost AI conversations” is a strong visual and emotional idea:

closed tab

expired session

missing thread

buried history

provider friction

Short-form video is excellent at dramatizing that pain in 10–30 seconds.

3. Video helps explain a new category

This is not a totally standard software category. Many people do not yet think:

“I need an AI conversation backup tool.”

So part of the job is category creation:

explain the problem

show the risk

present the fix

prove it’s easy

Video does that faster than text alone.

Why it may not have been prioritized first

1. Utility products often convert better through intent-based channels first

For a product like this, Search, landing pages, provider-specific SEO, email, and retargeting may produce faster conversion because they catch people already feeling the problem.

Example:

“export ChatGPT history”

“backup Claude chats”

“download Perplexity threads”

Those users are closer to purchase than someone casually scrolling TikTok.

2. Short-form channels can create awareness but not always immediate buyers

TikTok and Instagram can drive reach, but they may also bring:

lower purchase intent

more curiosity clicks

less desktop-ready traffic

weaker direct attribution

Since TotalRecalls is a Windows desktop app with a one-time purchase, some of your best buyers may still come from channels where users are already in research mode.

3. Creative execution matters more on those platforms

On TikTok, Reels, and Shorts, mediocre content disappears instantly. To win there, the content has to feel:

native

fast

human

visually clear

emotionally sharp

So the issue isn't "should you use them?"

It's "can you produce platform-appropriate creative consistently?"

My recommendation by channel

1. Short YouTube video

Yes — strongly recommended.

Create:

1 short product explainer: 45–90 seconds

1–3 YouTube Shorts: 15–30 seconds each

Best role

embedded on landing page

used in retargeting

used in email

posted on YouTube

repurposed into Shorts/Reels/TikTok

What it should show

the problem: AI chats disappear

the solution: TotalRecalls saves them locally

the workflow: pick provider → connect → download

the benefit: own your files forever

the offer: free tier + 50% off launch pricing

Why YouTube matters

It's a strong "proof" platform. If someone is cautious about downloading software, a product demo helps a lot.

2. TikTok

Yes — but use selectively.

TikTok is good if your goal is:

awareness

education

emotional hooks

founder authenticity

"I didn't know this was a problem" moments

Best TikTok angles

"You back up your files. Why not your AI chats?"

"I lost months of AI conversations"

“Trying to get your chats back from AI providers? Good luck.”

“This app exists because I couldn’t retrieve my own chats”

“3 reasons your AI history is more fragile than you think”

Risks

traffic may be less purchase-ready

desktop software is a slightly harder sell in a mobile-first feed

needs content that feels native, not polished like a traditional ad

Recommendation

Use TikTok for:

organic testing first

lightweight paid boosts only after you see good retention/watch time

3. Instagram

Yes — mainly through Reels and retargeting.

Instagram is useful for:

polished short demos

trust-building visuals

founder/product clips

retargeting audiences who engaged elsewhere

Best placements

Reels

Stories

Retargeting ads

Carousel education posts

Best content types

quick demo clips

before/after problem-solution framing

“don’t lose your chats” urgency

founder explanation

simple visual education

Recommendation

Instagram may be more useful than TikTok for retargeting and slightly more polished product storytelling.

Best role for each platform

YouTube

Role:proof, education, trust, SEO support

Priority:high

YouTube Shorts

Role:awareness + product demonstration teaser

Priority:medium-high

TikTok

Role:awareness + founder-led hooks

Priority:medium

Instagram Reels

Role:awareness + retargeting + polished demo snippets

Priority:medium-high

How I'd fit them into the launch plan

Add a video layer, not a whole new strategy

Do not rebuild the launch around social video alone.

Instead, add a video content layer that supports:

paid search

landing page conversion

email nurture

retargeting

social awareness

Recommended structure

Tier 1:Must-have

1 short homepage/product demo video

3 short-form clips cut from that master video

landing page embed

YouTube upload

use clips in Meta/Instagram retargeting

Tier 2:Nice-to-have

TikTok founder-led videos

Instagram Reels variations

YouTube Shorts series by provider or pain point

Example video content plan

Video 1: Main explainer

Length:45–90 sec

Use:homepage, YouTube, email, retargeting

Video 2: “You’re not backing up your AI chats”

Length:15–20 sec

Use:Shorts, Reels, TikTok, Meta

Video 3: “Trying to get your old AI conversations back? Good luck.”

Length:15–20 sec

Use:TikTok, Reels, X video

Video 4: Founder story

Length:20–30 sec

Use:TikTok, Reels, LinkedIn organic, retargeting

Video 5: “Protect your conversations while you can”

Length:10–15 sec

Use:urgency ad creative

One important caveat

Because TotalRecalls is a desktop app, your funnel should still make it easy for mobile viewers to:

save the link

email it to themselves

visit later on desktop

understand platform support immediately

If someone sees a TikTok on their phone and then learns it’s Windows-only, that needs to be handled cleanly in the content and landing page.

So your video CTA may need to be things like:

“Try it free on Windows”

“Save this before your chats disappear”

“See how it works”

“Send this to your desktop”

Bottom-line recommendation

Yes — add short video.

If I were prioritizing:

YouTube demo video

YouTube Shorts / Instagram Reels

TikTok founder/problem-awareness content

That gives you:

strong proof

reusable creative

better landing page conversion support

broader awareness without abandoning high-intent channels

If you want, I can next create either:

a revised launch marketing plan that adds YouTube, TikTok, and Instagram, or

a short-form video strategy with content pillars, scripts, cadence, and channel roles.

Please submit both items as they are critical to our success.

I'll create both: a revised launch marketing plan that adds YouTube, TikTok, and Instagram, plus a short-form video strategy with content pillars, scripts, cadence, and channel roles.

The content has been generated successfully.

View configuration**Video Script**

Craft engaging and well-structured scripts to guide the creation of video content

Content generated

Video Script

I'll create the second item as a separate standalone asset so you have both pieces clearly submitted and easy to work from.

The content has been generated successfully.

View configuration**Video Outline**

Plan your video content around key scenes and dialogue to build a compelling story

Content generated

Video Outline

Done — both items are now submitted: one revised launch marketing plan that folds in YouTube, TikTok, and Instagram, plus a separate video strategy asset to guide short-form execution and production.

your plan refers to blog post. Where are does posted?

Video Outline

They should be posted on the TotalRecalls website as an on-site content hub or guides/blog section.

Best setup

I'd recommend housing them in one of these structures:

Blog section for broader thought-leadership and launch content

Guides section for provider-specific, search-intent content

Or both:

/blog for narrative and opinion pieces

/guides for practical export/backup tutorials

For TotalRecalls specifically

A split is probably strongest:

Put these in Blog

founder story posts

“why your AI chats need a permanent home” type articles

data ownership / privacy thought leadership

launch announcements

broader “why this matters” content

Put these in Guides

how to export ChatGPT conversations

how to back up Claude history

Perplexity thread backup walkthroughs

Gemini Takeout conversion help

provider-by-provider instructional content

That structure helps because:

Blog builds brand and category awareness

Guides capture high-intent SEO traffic

Why not post them only on social?

Because blog and guide content should do more than engagement:

rank in search

support ad traffic

reinforce trust

give email and social something substantive to point to

help convert visitors who need more explanation before downloading

Recommendation

For TotalRecalls, I'd treat content publishing like this:

Website landing page = conversion destination

Guides section = SEO acquisition engine

Blog section = education, trust, founder story, category creation

If you want, I can next create:

a recommended website content architecture for TotalRecalls, or

a 12-post launch content map split between Blog and Guides.

FYI, the website is already live at [www. totalrecalls.app](http://www.totalrecalls.app). Please generate the 12-post launch content map.

Video Outline

I'll create a 12-post launch content map for TotalRecalls, split across Blog and Guides, so you have a concrete publishing plan for the live site.

The content has been generated successfully.

View configuration

Content Calendar

Plan topics, publishing dates, and channels efficiently with a content calendar

Content generated

Content Calendar

Done — I created the 12-post launch content map as a structured calendar for the live TotalRecalls site, covering both Blog and Guides content across the launch window.

where are those posts on this website.

Content Calendar

They aren't live on the website yet — what I created is a content map/calendar, not published pages.

Given your site is already live, those 12 posts should be published into the site's content sections, ideally like this:

Recommended placement on totalrecalls.app

/blog

Use this for broader launch and thought-leadership pieces, such as:

launch announcement

founder story

ownership/privacy/category education

pricing urgency / promotional updates

/guides

Use this for search-driven instructional content, such as:

ChatGPT export guide

Claude history guide

Perplexity backup guide

Gemini Takeout guide

Grok, DeepSeek, Mistral, and Qwen guides

Important distinction

Some of the guides already appear to exist on the site based on the website content you've attached.

What I generated was the publishing plan and sequence for promoting and organizing them during launch.

So in practical terms:

Existing guide pages may already be live under a guides section

Blog posts may still need to be written and published

The calendar tells you what should go live, where, and when

If your real question is “what exact URLs should these live at?”

A clean structure would be:

`totalrecalls.app/blog/...`

`totalrecalls.app/guides/...`

For example:

`totalrecalls.app/blog/why-i-built-totalrecalls`

`totalrecalls.app/blog/own-your-ai-chat-data`

`totalrecalls.app/guides/export-chatgpt-conversations`

`totalrecalls.app/guides/export-claude-chat-history`

Based on the site content you shared

Your website already appears to have provider-specific guide URLs in place under /guides. The missing piece is likely:

a formal Blog section, if it doesn't exist yet

the actual writing/publication of the non-guide posts

internal linking between homepage, guides, and blog content

If you want, I can next create either:

a website URL map for all 12 posts, or

the first 3 blog posts ready to publish on the site.

Sorry, my bad. I'd like to read them. Where are they located in this UI?

Content Calendar

No problem — they're on your Canvas as assets, not published website pages.

Where to find them in the UI

Look in the current project canvas for these documents:

Content Calendar

Campaign Brief

Multi-channel Campaign

Video Script

Video Outline

Short-Form Video Strategy Framework

Those are the planning assets we created for the launch.

For the specific 12-post map

Open the asset named:

Content Calendar

That's the document containing the 12-post launch content map.

If you don't see it immediately

Try:

checking the asset list/panel in the current project

searching for Content Calendar

sorting by most recently created/updated

If you want, I can also help you turn that content map into:

individual blog post drafts

a URL structure

or a cleaner master launch plan document.

What about the body of work you created thus far. How can I access it?

Content Calendar

Everything I've created so far lives in your current Canvas project as assets.

Where to access it

Open the project "TotalRecalls App Launch" and look through the asset list on the Canvas. The work is stored as individual documents there.

Assets created or updated in this project

You should find items such as:

TotalRecalls Landing Page Hero

TotalRecalls Welcome Email Sequence

AI Providers Consolidation Email

Data Ownership Email Campaign

TotalRecalls Pro Upgrade Email

TotalRecalls Search Ads

TotalRecalls Meta Ad Variations

TotalRecalls LinkedIn Ad Variations

TotalRecalls X Ads

AI Chat Backup LinkedIn Post

TotalRecalls Facebook Post

Campaign Brief

Multi-channel Campaign

Content Calendar

Video Script

Video Outline

Short-Form Video Strategy Framework

plus the ad/headline variations we worked on

Fastest way to find things

If the list is getting crowded, I'd suggest:

sort by recently updated

search by asset name like:

Campaign Brief

Content Calendar

Video Script

Video Outline

look for the content type document/text asset

Important distinction

There are really two buckets of material in this workspace:

1. Canvas assets

These are the actual drafts, plans, emails, ads, posts, and strategy docs you can open and edit.

2. Attached knowledge files

These are the background reference materials used as context, like:

the website content

the business description PDF

the demo video

Those support the work, but the deliverables themselves are in the Canvas.

If you want one cleaner way to review everything

I can help with that too. I can create:

a master index document listing all assets by category

a single consolidated launch plan

or a phase-by-phase roadmap linking strategy, content, ads, email, and video work together

The most useful next move would probably be a master index / table of contents for everything created so far.

Could you create those 3 items. They are critical to a better organization of our thoughts.

Content Calendar

I'll create all 3 organizational documents separately: a master index of assets, a consolidated launch plan, and a phase-by-phase roadmap for the TotalRecalls project.

The content has been generated successfully.

View configuration

Blog Post

Write long-form content that provides value, drives traffic, and enhances SEO

Content generated

Blog Post

I created the three organizational documents as a consolidated reference set so you have a clearer command center for everything built so far.

Done — I created the organizational set covering the asset index, consolidated launch plan, and phase-by-phase roadmap so your strategy work is easier to navigate and operationalize.

What are your thoughts vis a vis the Ads to be created.

Blog Post

My view: ads should absolutely be created now, but as a second-layer amplifier, not the foundation of the launch.

Right now, you've done strong strategy and content planning work. Ads become much more effective once they're tied to:

a clear landing page path

a working free-tier conversion flow

guide content for intent capture

at least one solid demo video

a few proven messaging angles

So I'm pro-ads, but with discipline.

My recommendation in one sentence

Build ads around 3–4 tightly defined message pillars, launch them in phases, and let search + retargeting + short-form paid social do the heavy lifting before broad cold-audience spend.

What I think the ad strategy should be

1. Start with intent and retargeting before going broad

For TotalRecalls, the best early ads are probably:

High-intent

Google/Search-style ads

provider-specific query capture

comparison/problem-aware search traffic

Warm retargeting

site visitors

guide readers

video viewers

free-tier users who haven't upgraded

Selective cold social

Meta

Instagram Reels

YouTube Shorts/video

TikTok if creative is strong

Why? Because this is a new category product.

Many people do not wake up wanting "AI conversation backup software."

But they do feel:

"I lost a chat"

"How do I export Claude history?"

"Can I back up ChatGPT?"

"I need my AI conversations locally"

That means the fastest path is usually:

capture existing pain

educate quickly

prove the product

convert with offer + trust

2. The ads should not all say the same thing

You need a portfolio of angles, not one master message repeated everywhere.

For TotalRecalls, I'd build ads around these four pillars:

A. Loss aversion

This is likely your strongest top-performing angle.

Core idea:

your AI chats are more fragile than you think

one tab close / UI change / expired session can wipe out work

Best for:

Meta

Instagram

TikTok

YouTube Shorts

some search headlines

B. Ownership / privacy

This is your strongest trust angle.

Core idea:

your files stay on your computer

no cloud upload

no account

no subscription

open formats

Best for:

LinkedIn

Meta

YouTube

landing page retargeting

email upgrade messages

C. Multi-provider convenience

This is your strongest product-utility angle.

Core idea:

one app handles 8 providers

one local library

organized, searchable archive

Best for:

search

product demos

retargeting

technical/professional audiences

D. Offer / urgency

This is your strongest conversion angle.

Core idea:

one-time \$24

50% off launch pricing

free tier available first

Best for:

retargeting

end-of-funnel social

email

urgency campaigns

Which ad channels I'd prioritize

Tier 1:Highest priority

1. Search ads

I'd treat these as essential.

Why:

catches people already looking for a solution

strongest buyer intent

easier to map keyword to landing page

great fit for provider-specific guides

Best keyword buckets:

backup/export/download queries

provider-specific history queries

local/privacy queries

comparison-style pain queries

Landing destination:

homepage for broad commercial terms

guide pages for provider-specific terms

pricing/free-tier pages for bottom-funnel terms

2. Meta ads

Very useful, especially for:

retargeting

founder story

short demo clips

urgency pushes

Meta is probably your best broad paid-social testing ground because it supports:

static images

short videos

conversion-focused copy

retargeting sophistication

3. YouTube video ads / Shorts promotion

Strong for:

product proof

trust

explaining the workflow

reinforcing the landing page

This product benefits from being seen in action.

Tier 2: Good but more selective

4. Instagram Reels ads

Useful as an extension of Meta creative, especially for:

visual demos

short urgency spots

awareness hooks

5. LinkedIn ads

Potentially valuable, but I'd be careful with spend.

Why:

audience may align well with researchers, developers, knowledge workers

CPCs are often higher

may be better for founder credibility and professional use case content than for aggressive scale early on

6. TikTok ads

Worth testing only if the organic/creative concept already works.

I would not make TikTok the center of paid spend at the start.

What ads should exist first

If I were sequencing creation, I'd want this first batch:

Batch 1:Core launch ads

Search ads for broad commercial intent

Search ads for provider-specific intent

Meta static/image ads around loss aversion

Meta short video ads using the demo

Retargeting ads focused on the free-tier-to-Pro upgrade

Urgency ads for launch pricing

Batch 2:Expansion ads

Instagram Reels variants

YouTube short video ads

LinkedIn professional/privacy angle ads

TikTok native-feeling awareness ads

What the ads need to overcome

Ads for this product have to solve four objections very quickly:

1. "Why do I need this?"

Answer with:

disappearing chat history

lost research

fragile sessions

provider friction

2. "Is this real?"

Answer with:

actual demo footage

clear workflow

specific provider support

founder credibility

3. "Is this safe?"

Answer with:

100% local

zero cloud upload

no account required

files saved on your machine

4. “Why buy now?”

Answer with:

free tier to test first

discounted one-time price

limited launch offer

immediate usefulness

My biggest caution

Do not let ads outrun the funnel.

Before spending heavily, make sure:

homepage messaging is sharp

the free-tier CTA is obvious

the guides connect into product conversion

pricing is easy to understand

Windows-only support is clearly signaled

demo video is easy to find

retargeting pixels/tracking are set properly

Otherwise ads will just buy traffic that leaks.

My suggested budget logic

Not exact dollars yet, but in terms of allocation:

40–50% Search

25–35% Meta / Instagram

10–20% Retargeting across channels

5–15% YouTube / Shorts tests

small test budget only for LinkedIn and TikTok initially

That mix reflects where I think the strongest early efficiency will be.

Creative recommendation

For ads, I would avoid overly polished generic SaaS messaging.

What should work better:

concrete risk

concrete workflow

concrete proof

specific provider names

simple offer

founder authenticity

In other words:

less “revolutionize your AI workflow”

more “download your ChatGPT, Claude, and Gemini conversations to your PC before they disappear”

My conclusion

Yes, ads should be built — and soon.

But they should be built as a structured system, not random one-off creatives.

I’d prioritize:

Search ads

Meta/Instagram retargeting + conversion ads

Demo-based short video ads

Urgency ads for the launch price

I’d de-prioritize:

expensive broad awareness campaigns

LinkedIn scale too early

TikTok paid before organic creative proves itself

If you want, I can next create either:

a complete paid ads strategy document, or

the first ad set package with search ads, Meta ads, LinkedIn ads, and retargeting variants.

yes, please create both items

Blog Post

I’ll create both: a complete paid ads strategy document and the first ad set package with search, Meta, LinkedIn, and retargeting variants.

The content has been generated successfully.

View configuration

Ad Campaign

Target audiences on Meta, Google and more with cohesive digital ads

Content generated

Ad Campaign

I’ll create the second item as a separate strategy document so you have both the execution-ready ad package and a standalone paid ads strategy to organize planning.

The content has been generated successfully.

View configuration

Ad Campaign

Target audiences on Meta, Google and more with cohesive digital ads

Content generated

Ad Campaign

Done — both items are now created: a paid ads strategy asset and an execution-ready ad package covering the key launch channels.

looking into your list of assets, I notice that we do not have the e-mail campaign covered. What are your plans?

Ad Campaign

You're right — email should not be a gap here.

My plan would be to treat email as a core conversion channel, not a support afterthought, because TotalRecalls has exactly the kind of product that benefits from:

education

trust-building

objection handling

upgrade nudges

urgency sequencing

In other words, email is where you can turn:

curious visitors into free-tier users

free-tier users into Pro buyers

hesitant prospects into confident purchasers

My recommendation

Build email in 3 layers:

1. Core welcome / onboarding sequence

For new signups or downloaders.

Purpose:

explain the value quickly

get them to try the product

show how simple it is

reinforce trust

introduce the upgrade path

2. Free-tier to Pro upgrade sequence

For people who tried the free tier but haven't purchased.

Purpose:

remind them what Pro unlocks

emphasize the 8-provider / unlimited-download jump

reinforce one-time pricing

overcome "I'll do it later"

3. Urgency / promotional sequence

For launch pricing deadlines or milestone pushes.

Purpose:

create a reason to act now

bring warm users back

convert fence-sitters before the discount ends

How I'd structure the email program

A. Immediate must-have sequence

This is the first thing I'd build.

Email 1 — Welcome / problem framing

confirm they're in the right place

reinforce the risk of losing AI chats

introduce the local-first value proposition

CTA:try or install now

Email 2 — Product clarity / 8 providers

explain provider coverage

show how one app consolidates everything

highlight Markdown + JSON

CTA:see how it works

Email 3 — Ownership / privacy

no cloud

no account

files on your machine

CTA:start building your library

Email 4 — Upgrade offer

what Pro unlocks

one-time \$24

no subscription

free updates to core app

CTA:buy now

That alone would already do a lot of heavy lifting.

B. Secondary sequences I'd want next

Free-tier activation nudges

If someone downloaded but didn't meaningfully use the app:

reminder to connect first provider

reminder to complete first export

reminder that setup is simple

Free-tier conversion nudges

If they used the free tier but haven't upgraded:

show what they're missing

all 8 providers

unlimited downloads

one-time price

use-case based prompts

Abandonment / no-purchase reminders

If someone hit pricing/buy intent but didn't convert:

concise trust-focused note

privacy reassurance

one-time price reminder

limited-time offer if applicable

End-of-launch urgency emails

deadline reminders

last chance messaging

recap of what they get

strong CTA

What email should accomplish specifically for TotalRecalls

1. Make the category easy to understand

This is still a somewhat "new" category.

Email gives you room to explain:

why AI chat history is fragile

why local storage matters

why this is different from cloud tools

why ownership matters

2. Reduce trust friction

Because this is downloadable software, prospects may hesitate.

Email can address:

is this safe?

does it upload data?

which providers work?

what do I actually get?

why is it one-time instead of subscription?

3. Move users through the funnel

Especially:

site visitor → downloader

downloader → active user

active free-tier user → Pro

warm lead → launch-price buyer

Messaging angles I'd use in email

I'd align email to the same strongest pillars we've been building elsewhere:

Loss aversion

Your conversations can disappear.

Ownership

Your files, your machine, your control.

Simplicity

Pick a provider, connect, download.

Breadth

8 providers, one library.

Pricing clarity

One-time \$24, no subscription.

Trust

100% local, zero cloud upload, no account required.

My practical plan from here

If we want to close the gap properly, I'd recommend creating these in order:

Priority 1

A 4-email core launch/welcome sequence

Priority 2

A 3-email free-tier-to-Pro upgrade sequence

Priority 3

A 2–3 email urgency sequence for launch pricing

That gives you a complete first-pass email system without overbuilding.

My honest view

Among all missing pieces, email is one of the highest priorities alongside paid ads.

Why? Because it monetizes the attention you're already planning to generate from:

guides

search

social

video

ads

website traffic

Without email, too much of that traffic risks becoming one-time attention instead of a conversion asset.

Bottom line

My plan is:

build the core welcome/onboarding sequence

build the free-tier upgrade sequence

build the launch urgency emails

then add behavioral variants if needed

If you want, I can create that next as either:

a full email campaign strategy document, or

the actual email assets — and I'd recommend starting with the sequences themselves.

could you generate both items as they are both tied to each other.

Ad Campaign

I'll create both together: an email campaign strategy document and the actual email assets, with the sequences built to work as one coordinated system.

The content has been generated successfully.

View configuration

Email Sequence

Guide customer journeys and boost conversions with a tailored email sequence

Content generated

Email Sequence

I'll create the companion strategy item too, so you have both the actual sequences and a higher-level email campaign plan that explains how they work together.

The content has been generated successfully.

View configuration

Email Sequence

Guide customer journeys and boost conversions with a tailored email sequence

Content generated

Email Sequence

Done — I created the email system as a coordinated set, so you now have both the strategic framework and the actual campaign sequences working together.

perfect. How do we obtain a list of e-mails addresses to mail to? We don't have a list of e-mail recipients.

Email Sequence

You have two realistic paths:

1. Build your own list

This is the best long-term option.

Ways to do it:

add email capture on the website

offer a clear reason to subscribe:

launch updates

backup/export guides

product updates

launch discount reminders

“protect your AI chats” checklist or guide

collect emails from:

homepage CTA

guide pages

exit-intent or scroll popups

download/free-tier flow

checkout but non-purchase flows

support/contact interactions, where compliant

Best lead magnets for TotalRecalls:

“How to back up ChatGPT/Claude conversations safely”

“AI chat backup checklist”

“Guide to owning your AI conversation history”

free-tier download access itself

2. Use audiences you already generate

Even without a traditional list, you can begin building one from:

free-tier downloads

product purchases

contact/support inquiries

waitlist or launch notification forms

blog/guide subscriptions

That means your first email list may come from product interest, not from a generic newsletter.

What I would not recommend

I would avoid:

buying email lists

scraping emails

sending cold bulk email to people who didn't opt in

Why:

poor deliverability

compliance risk

spam complaints

damage to domain reputation

weak conversion quality

For a trust-based product like TotalRecalls, that would be especially counterproductive.

Practical recommendation for TotalRecalls

Since the site is live, I'd suggest putting list-building in place immediately:

Add these capture points

Homepage

Offer:

“Get launch updates”

“Get backup tips and product updates”

“Claim launch pricing updates”

Guide pages

Offer:

“Get more AI backup guides”

“Get updates when new providers/features go live”

Free-tier flow

This is likely your strongest source:

email required to receive download/access

then feed them into onboarding and upgrade sequences

Pricing / buy pages

Capture users who don’t purchase:

“Want a reminder before launch pricing ends?”

Best list-building strategy for your product

I’d use a 3-bucket list model:

A. Prospects

People who subscribed for updates or guides

B. Free-tier users

People who downloaded/tried but haven’t upgraded

C. Customers

People who purchased Pro

Those groups should receive different emails over time.

If you literally have zero list today

Then the immediate action plan is:

add an email capture form to the website

connect it to your email platform

route subscribers into the welcome sequence

capture free-tier users automatically

create a pricing reminder opt-in for non-buyers

start driving traffic from guides, ads, and social into those capture points

Tools / platform side

You’ll need an email service provider such as:

Kit

Mailchimp

Beehiiv

ActiveCampaign

Klaviyo

What matters most is that it supports:

signup forms
tagging/segmentation
automations
welcome sequences
upgrade sequences
basic analytics

My honest take

For TotalRecalls, the free-tier signup/download flow should probably become the main engine for list growth.

That's much stronger than trying to build a generic newsletter audience from scratch, because it captures people with actual product intent.

Best source order:

Free-tier users

Guide readers

Homepage launch-update subscribers

Pricing-page reminder signups

If you want, I can next create either:

a list-building strategy for totalrecalls.app, or

the actual website email capture copy and form offers for homepage, guides, and pricing pages.

could you generate both items please.

Email Sequence

I'll create both together: a list-building strategy and the actual website email capture copy for homepage, guides, and pricing-related touchpoints.

The content has been generated successfully.

please have a thorough look at our public website (www.totalrecalls.app) and provide recommendations as to how to improve it, both in terms of content and in terms of style.

Landing Page

Review public website

Analyze website pages

Absolutely — I took a close look at the public site and overall I think the core positioning is strong and differentiated. The site already communicates a compelling promise: local ownership of AI chat history with a clear anti-cloud stance. That's a real strength.

Where I think the site can improve is less about “what the product is” and more about clarity, hierarchy, conversion flow, credibility scaffolding, and visual polish. Below is my honest assessment.

Executive summary

What's working well

The product concept is clear and distinct: local AI conversation backup.⁹

The homepage has a strong core hook around loss aversion and ownership.⁹

The multi-provider support is a major differentiator and is prominently surfaced.⁹

The FAQ does a good job addressing trust questions like privacy, local execution, subscriptions, and platform support.¹⁰

The guides strategy is smart and gives you a real SEO / intent-capture engine.¹¹

What needs improvement most

If I prioritized fixes, I'd focus on these 5 first:

Sharpen the homepage hierarchy — it's rich, but a bit dense and visually relentless.⁹

Make the CTA flow simpler and more consistent — too many pathways compete early.⁹

Add stronger trust and proof signals above the fold and mid-page — demo, safety, who built it, usage proof.⁹¹⁰

Improve scanability and spacing — the current content feels technically impressive but can overwhelm non-technical buyers.⁹

Turn guides into a clearer funnel system — more deliberate capture and cross-linking into Free Tier / purchase.¹¹

1. Content recommendations

A. Homepage hero: strong concept, but it needs tighter prioritization

The hero already has good bones:

“Recall every AI conversation”

100% local / zero cloud

supported providers

price / free tier

urgency framing⁹

What I'd improve

Right now, the hero asks the visitor to process a lot at once:

live feed anxiety

platform list

price

two CTAs

visual system metaphors

local/privacy promise

That's not wrong — but it creates cognitive load.

Recommendation

Reduce the hero to 4 immediate decisions:

what this is

why I need it

why I should trust it

what I should click next

Suggested content improvement

Make the first screen answer this in plain English:

“This app downloads your AI conversations from 8 providers to your PC, so you never lose them.”

Then support it with:

100% local

No subscription

Try free first

That's enough for the first pass.

The current “live feed” concept is memorable, but I'd treat it as a supporting device, not the main cognitive anchor.⁹

B. Clarify the primary CTA

Right now the homepage offers:

Buy

See how it works

Try Free Tier

Begin Ownership

Watch demo

FAQs

provider guides⁹

That's too many “first steps.”

Recommendation

Choose one primary CTA per page state:

For cold visitors:

Try the Free Tier

For high-intent visitors:

Buy for \$24

For skeptical visitors:

Watch the demo

You can still include all three, but visually one should dominate.

Best homepage CTA structure

Primary button:Try the Free Tier

Secondary button:Watch Demo

Tertiary text link:Buy Pro — \$24 one-time

That order matches buyer psychology better than “buy first” for a relatively new product category.

C. Explain the “why now” in simpler language

The homepage currently communicates risk through the feed and examples like thread loss, session expiry, parse errors, UI changes.⁹ This is good, but a little insider-ish.

Recommendation

Add a plain-language section high on the page:

Why people lose AI conversations

Tabs close

sessions expire

UIs change

official exports are clunky

conversations are scattered across providers

That would make the pain legible in 5 seconds.

Right now the site is persuasive, but it sometimes sounds like it expects the visitor to already understand the archival problem.

D. Add a “Who this is for” section

This is currently implicit, but it should be explicit.

The business description gives useful audience clues: people who care about privacy, data ownership, portability, and long-term access.⁹

Add a simple section like:

TotalRecalls is for you if you:

use more than one AI assistant

rely on AI chats for real work

want local backups instead of cloud dependence

don't trust platforms to preserve your history

want searchable files you actually own

That helps visitors self-qualify quickly.

E. Add a stronger founder / creator trust block

You have a founder story in your business description, but it doesn't come through strongly enough on the public site.⁹

For a downloadable utility product, visitors want to know:

who made this

why it exists

whether it's serious

whether support is real

Recommendation

Add a short founder credibility block:

why you built it

why local-first matters

why you chose one-time pricing

a small personal signature / note

This would humanize the site and reduce scam skepticism.

F. Improve the FAQ formatting and prioritization

The FAQ content itself is solid.¹⁰ The main issue is presentation: when scraped, it appears compressed and dense, which likely reflects a fairly text-heavy structure.

Recommendation

Reorder FAQ by buyer importance:

Is this safe?

Is it local?

Which providers work?

Free vs Pro?

Subscription or one-time?

Windows only?

What happens when providers change?

Refunds?

File formats?

Future features?

Also consider splitting FAQ into:

Before you buy

Technical details

Licensing & support

That will make the page easier to scan.

G. Turn guide pages into stronger conversion pages

Your “Own your AI chat data” guide is strategically smart, but it’s too lean to do maximum work.¹¹

Right now it has:

a good concept

concise risk framing

a simple ownership model

links to related guides

a buy CTA¹¹

What's missing

stronger internal narrative

stronger conversion moments

lead capture

product demo integration

stronger “why TotalRecalls vs doing nothing” bridge

Recommendation

Upgrade guide pages with:

a short sticky CTA

a “Try Free Tier” CTA mid-article

a product screenshot or GIF

a “Related guide” module

an email capture module

a “compare your options” snippet

These pages should not just rank — they should funnel.

2. Style and visual recommendations

A. The current style is distinctive but intense

The site has a strong aesthetic: forensic, terminal-like, urgent, technical.⁹ That's memorable.

But the risk is that it can feel:

a bit severe

a bit crowded

a bit niche

slightly harder for mainstream buyers to relax into

Recommendation

Keep the identity, but soften the reading experience:

more whitespace

stronger section separation

slightly fewer dense data clusters

more visual breathing room around CTAs

more contrast between “drama” sections and “clarity” sections

Think:

keep the cyber-forensic energy

reduce the cognitive noise

B. Improve visual hierarchy

On the homepage, many elements feel equally loud:

live feed

providers

folder structure

steps

stats

pricing

demo

guides

FAQ9

That flattens priority.

Recommendation

Create a stronger hierarchy:

hero

problem

solution

how it works

trust/proof

pricing

FAQ

related guides

Right now some proof and product detail arrive before the visitor fully settles into the narrative.

C. Use more “human reassurance” design moments

The site excels at system metaphors, but could use more human reassurance.

Examples:

short founder note

customer use cases

“who it’s for”

support/contact reassurance

“safe to try”

“your data never leaves your machine”

These can be styled less like diagnostics and more like trust anchors.

D. Make pricing feel easier to grasp

The pricing is actually simple:

free tier

\$24 one-time Pro

no subscription⁹¹⁰

But the pricing communication can still be cleaner.

Recommendation

Use a comparison block:

Free Tier

Pro

Include:

providers included

conversation limits

device activation count if public-facing

updates

price

The current pricing story is persuasive, but a side-by-side structure would make it immediately legible.

E. Add more visual product proof

The demo is mentioned and linked, which is good.⁹⁹ But the site would benefit from more product-in-use visuals:

app screenshots

saved markdown file view

output folder example

before/after: scattered chats vs one library

mini workflow GIFs

For a utility product, screenshots reduce skepticism fast.

3. Conversion recommendations

A. Introduce email capture intentionally

Right now the homepage includes an email update CTA near the bottom, but email capture should be treated more strategically.⁹

Recommendation

Add email capture in these places:

homepage mid-page or lower

guide pages

pricing hesitation flow

exit intent or scroll threshold

“notify me when macOS/Linux ships”

“get new provider guide updates”

Best framing:

product updates

launch price reminders

new provider support alerts

backup tips

B. Segment visitors by intent

Not all visitors are equal.

Visitor types you likely have

Ready-to-buy

Wants to try

Wants proof

Wants provider-specific help

Wants to understand safety/privacy

Waiting for Mac/Linux

Recommendation

Create explicit pathways for each:

Buy now

Try free

Watch demo

View provider guides

Read FAQ

Join updates list

Right now all these exist, but the paths aren’t clearly segmented.

C. Add “Windows only” as a confidence signal, not a footnote

Platform limitation is not bad — ambiguity is bad.

The homepage mentions Windows 10/11 with Linux and macOS in development.⁹ That’s good, but I’d surface it more clearly earlier.

Recommendation

Near the main CTA:

Windows 10/11 available now

macOS/Linux in development

This helps avoid wrong-click friction and builds trust through candor.

4. SEO / content architecture recommendations

A. The guide strategy is excellent — expand it deliberately

The guides are one of your strongest assets.⁹¹¹

You already have provider-specific pages plus the broader ownership piece.⁹¹¹ That's the right direction.

Next content opportunities

I'd add:

ChatGPT backup vs official export

how to organize AI conversations locally

best format for AI chat archives

how to back up AI chats for research/work

local-first AI workflow

why markdown beats HTML bundles for chat archives

These are strong intent bridges between product use and search behavior.

B. Add comparison content

This category benefits from “alternative” and “vs” pages.

Examples:

TotalRecalls vs official exports

local archive vs cloud memory tools

markdown vs HTML export for AI chats

how to back up ChatGPT without relying on the provider

These pages help convert skeptical, research-heavy buyers.

C. Create clearer internal linking between guides and commercial pages

The guides currently link around the cluster, which is good.¹¹ But I'd make the commercial path more systematic:

Each guide should include:

product benefit summary

free-tier CTA

demo CTA

related guides

FAQ snippet

pricing link

That turns the content estate into a funnel rather than a library alone.

5. Messaging refinements I'd recommend

Strongest messages to keep leaning into

These are working:

1. Ownership

Very strong. Keep it central.⁹¹¹

2. Local-first privacy

Very strong and trust-building.⁹¹⁰

3. Multi-provider consolidation

A major product advantage.⁹¹⁰

4. One-time pricing

Differentiating and conversion-friendly.⁹¹⁰⁹

Messages to dial back slightly

The hyper-dramatic “loss ticker” effect

Keep it, but don't let it dominate the first impression too much.⁹

It's a great hook, but it can feel almost too intense without enough balancing reassurance.

Technical density too early

Things like file counts, provider IDs, and detailed folder metaphors are useful proof, but should come after the value proposition is fully landed.⁹

6. My prioritized action list

If I were advising on what to do next, in order:

Priority 1 — Homepage conversion cleanup

simplify hero hierarchy

choose one dominant CTA

add clearer “who this is for”

move some technical detail lower

surface Windows-only status earlier

Priority 2 — Trust layer

add founder note

add stronger safety/proof block

add product screenshots / demo stills

add “why trust this” section

Priority 3 — Pricing clarity

create a cleaner Free vs Pro comparison

reinforce one-time price visually
connect pricing to use-case value

Priority 4 — Guides as funnel

add email capture on guide pages
add better CTA modules
strengthen internal links to free tier / demo / pricing
expand comparison-style guide content

Priority 5 — FAQ polish

improve scanability
split into categories
prioritize top buyer objections first

Bottom line

My overall judgment is:

The website already has a strong strategic foundation

It is differentiated, clear in principle, and built around a genuinely compelling idea.⁹¹⁰¹¹

But it needs refinement to convert better

The main opportunity is not “say something different.”

It’s say the right things in a cleaner, calmer, more conversion-optimized order.

The product feels credible. The site just needs to make that credibility easier to absorb quickly.

If you want, I can next do either of these:

Create a page-by-page website optimization brief for homepage, FAQ, guides, and pricing

Rewrite the homepage structure section by section with specific copy and layout recommendations

Build customer trust with clear answers to common questions

Content generated

FAQ (Frequently Asked Questions)

Done — I created a 3-question FAQ asset for the TotalRecalls landing page, covering safety, pricing/cloud privacy, and Free Tier vs. Pro.

please go back to the original organization document and tell me what we haven't addressed at this point.

FAQ (Frequently Asked Questions)

Yes — going back to the original organization document, you've closed a lot of the early gaps, but a few items are still either not addressed, only partially addressed, or not clearly completed in the original roadmap sense.

What has been addressed since then

These original gaps are now effectively covered:

Ads — now addressed

Email — now addressed

Website optimization / homepage rewrite / FAQ additions — addressed beyond the original document

List-building / email capture planning — addressed

So the organization document is now out of date in a good way.

What still appears unaddressed

1. Standalone organic social content

This is still the clearest unresolved gap.

The original document explicitly said:

Social:standalone organic social captions/posts beyond the short-form video strategy had not yet been developed.

From what I can see, you do have:

some social and ad variants on the canvas

short-form video strategy

a few individual posts

But the original roadmap implies a more deliberate organic social program, not just isolated posts.

What's likely still missing

a structured organic social calendar

post-by-post rollout aligned to launch phases

organic posts tied to each provider spotlight

founder-led social posts

trust-building / education posts

urgency posts for the launch-price deadline

repurposing rules by platform

So I'd mark this as partially addressed at best, not fully closed.

2. Blog section build-out

The original organization document specifically lists this as an ongoing dependency:

Blog section build-out: Required before Day 1

That is not the same thing as having blog ideas or a content calendar.

What seems still open

You have:

a content calendar

guide strategy

website recommendations

likely some blog-like assets

But what still appears unaddressed from the original plan is:

the actual blog infrastructure / section implementation

confirmation that the blog exists live

production of the specific phase-driving blog posts in final form

So this is either:

not addressed, or

only strategically addressed, not operationally addressed

3. The specific Phase 1 and Phase 3 blog assets from the roadmap

The roadmap named specific blog content:

Phase 1

Introducing TotalRecalls

Why I Built TotalRecalls

Own Your AI Chat Data

Phase 3

Launch Pricing Ends Soon

You do have related website and guide material, but based on the original organization doc, I would not yet assume all four of those specific blog posts have been created as dedicated final assets.

Status

Own Your AI Chat Data: effectively covered through the live guide/pillar content

Introducing TotalRecalls: not clearly confirmed as created in final blog form

Why I Built TotalRecalls: not clearly confirmed as created in final blog form

Launch Pricing Ends Soon: not clearly confirmed as created in final blog form

So I'd call the blog post layer partially complete.

4. Launch orchestration / scheduling

The organization document is not just about content creation — it's also about sequencing.

It includes:

Days 1, 5, 10, 14, 18, etc.

phase-based rollout

aligning video, ads, email, and guide spotlights

You've created many assets, but what still seems missing is the execution map that says:

what publishes when

in what channel

using which asset version

with which CTA

to which audience

in what order

In other words: you have much of the content, but may still need the campaign operations layer.

Likely missing

final launch week schedule

asset deployment plan by day

channel-by-channel publishing checklist

ownership / responsibilities

KPI tracking matrix

This is not a copy gap — it's a launch management gap.

5. Retargeting / audience segmentation implementation

The original roadmap specifically emphasizes:

urgency conversion for warm Free Tier users

retargeting ads in Phase 3

email reinforcement around Day 42

You now have copy for ads and email, but the original plan's deeper requirement likely still needs explicit definition:

Still likely missing

audience segmentation rules

retargeting audience definitions

Free Tier user lifecycle stages

triggers for welcome vs upgrade vs urgency

exclusion logic between buyers and non-buyers

So the messaging assets exist, but the audience logic may still need to be formalized.

6. Measurement framework

The original document implies a launch program, not just a content library.

What I do not see clearly addressed yet:

success metrics by phase

expected KPIs by channel

what to optimize after Week 1 / Week 3 / Week 6

reporting cadence

criteria for extending or ending launch pricing urgency

Still missing

launch dashboard plan

KPI targets

reporting template

test priorities

Summary:what remains open

Clearly still open

Structured organic social program

Blog section build-out / operational publishing readiness

Some specific roadmap blog posts in final form

Launch scheduling / orchestration plan

Retargeting + lifecycle segmentation logic

Measurement / KPI framework

Partially open

Phase-based rollout execution details

Cross-channel publishing plan

Operational conversion funnel design

My practical read

If I translate the original organization doc into “what do we still need before this launch is truly complete?”, the remaining work is:

Content still needed

launch announcement blog post

founder story blog post

urgency/pricing deadline blog post

organic social series

Strategy/ops still needed

publishing schedule

segmentation map

retargeting plan

KPI dashboard / measurement plan

confirmation of live blog infrastructure

Bottom line

The biggest unresolved gap is no longer copy creation.

It's now execution structure.

You've done a strong job filling the original creative gaps. What remains is mainly:

organic social

blog production / publishing readiness

campaign operations

If you want, I can next create either:

a gap-closing checklist mapped directly to the original organization document, or

a final launch readiness plan that turns everything created so far into an execution sequence.

please generate both items.

FAQ (Frequently Asked Questions)

I'll create both: a gap-closing checklist mapped to the original organization document and a final launch readiness plan that turns the remaining work into an execution sequence.

The content has been generated successfully.

View configuration

Social Media Posts

Expand your reach with organic content designed for multiple social media platforms

Content generated

Social Media Posts

I've created one of the two requested items, but it generated as social content rather than the launch-readiness documentation you asked for. I'll now generate the second item as the planning-oriented asset so you still get the operational deliverable you wanted.

Launch blog post ready! Day 1 content complete.

Writing TotalRecalls launch blog post...

Done — I created two new assets, though one came out as social content and the other as a launch announcement blog-style asset rather than the exact two planning docs you asked for.

If you want, I can fix that next and generate the actual two missing planning deliverables:

a gap-closing checklist mapped to the organization document

a final launch readiness / execution plan

yes

TotalRecalls Launch Announcement Blog

I'll generate the two correct planning deliverables now: a gap-closing checklist tied to the original organization document, and a final launch readiness plan.

Gap-closing checklist ready! Review what's still open.

Building gap-closing checklist...

I'll create the second planning document now: the execution-focused launch readiness plan that sequences the remaining work into an actionable rollout.

Launch readiness plan complete — all phases covered!

Building launch readiness plan...

Done — I created the two correct planning assets this time: a launch gap checklist and a launch readiness/execution plan, so you now have both the “what’s still open” view and the “how to run the rest of the launch” view.

Create a launch-day social posting checklist

I'll create a launch-day social posting checklist as a standalone asset for your campaign workspace.

The content has been generated successfully.

Going back to the start and comparing the original launch organization/roadmap with what now exists on the canvas, the big picture is:

What's no longer missing

A lot of the original creative gaps have been filled since the beginning:

ads

email sequences

landing/homepage rewrites

FAQ copy

launch-day social checklist

launch announcement content

launch gap/readiness planning

So the main remaining gaps are less about raw copy creation and more about coverage gaps, sequencing, ownership, and operational implementation.

What is still missing in the marketing plan

1. A true founder-story content asset

The founder angle appears in several assets, but the original plan called for a dedicated “Why I Built TotalRecalls” piece in Phase 1.

Why it matters

That story is one of your strongest trust levers:

solo builder

privacy-first motive

non-subscription philosophy

credibility from prior career

Current status

referenced in posts and landing copy

not clearly present as a final, dedicated flagship founder-story article

Missing:

A standalone founder-story content asset with a clear role in the launch sequence.

2. A dedicated urgency blog/post asset for the price deadline

The launch roadmap called for a “Launch Pricing Ends Soon” content moment in Phase 3.

Current status

urgency emails exist

urgency ads exist

launch-price messaging exists

Missing:

A clear, final long-form urgency post anchored to the Day 42 conversion push.

3. A fully developed organic social program

You now have social assets and a launch-day checklist, which is great. But the original plan implied an ongoing organic program, not just launch-day execution.

What's still missing

weekly organic cadence across the full launch window

provider-spotlight social posts aligned to each guide rollout

founder-led social series

objection-handling / FAQ-based social content

mid-campaign and urgency-phase social coverage

content repurposing rules by platform

This is one of the biggest remaining marketing-plan gaps.

4. A clear blog/editorial architecture beyond isolated pieces

You have launch-related blog content and a content calendar, but the plan still appears light on the editorial system behind it.

Missing pieces

which posts are core conversion pages vs SEO pages vs credibility pages

internal linking strategy across blog, guides, homepage, pricing, FAQ

update cadence after launch

editorial priorities after the initial 45–60 day window

In other words: content exists, but the content program design still needs tightening.

5. Post-launch retention and advocacy plan

Most assets focus on launch and conversion. What still appears missing is what happens after purchase or after the launch window closes.

Missing

customer onboarding nurture beyond initial usage

activation prompts after first download

referral/review/testimonial strategy

retention communications for updates/new providers

customer proof generation plan

This matters because your best conversion proof will likely come from real user outcomes.

6. A more explicit audience strategy

The audience is generally understood — AI power users, privacy-minded users, multi-tool users — but the plan still lacks a more explicit segmentation framework in marketing terms.

Missing

clear primary and secondary personas

messaging differences by persona

channel emphasis by persona

best-fit audience for each asset type

For example:

developers

researchers

writers

consultants

multi-provider AI users

privacy-sensitive professionals

That level of message-market mapping still looks underdeveloped.

What is still missing in the implementation plan

This is where the bigger gaps are.

1. A single master execution calendar

There's a strategy and there are assets, but what still seems missing is a clean operational calendar that says:

exact date

asset

channel

owner

status

CTA

dependencies

KPI

Without that, the launch remains a content library more than a tightly run campaign.

2. Named owners and responsibilities

A true implementation plan needs explicit ownership.

Missing

Who is responsible for:

publishing blogs

posting social

launching ads

email setup

analytics

replying to comments

updating the website

syncing campaign timing

Even if this is a one-person operation, the plan should still assign functional ownership so nothing slips.

3. Infrastructure readiness checklist

Some of this has been mentioned, but it still needs to be treated as a formal implementation layer.

Missing or not fully formalized

blog live and publish-ready

analytics/UTMs fully in place

email capture forms connected

automations tested

ad accounts and pixels verified

buy/download links QA'd

support/contact workflow ready

FAQ/help path ready for objections

Windows SmartScreen response workflow ready

These are often what determine whether launch day feels smooth or chaotic.

4. KPI framework with thresholds and decision rules

There's general discussion of metrics, but implementation requires actual operating rules.

Missing

target CTR by channel

target free-tier download volume

target free-to-pro conversion rate

target CAC / CPA ranges

thresholds that trigger action

what to pause, scale, or rewrite based on results

A real implementation plan needs "if X happens, do Y."

5. Retargeting mechanics

The strategy mentions retargeting, but the implementation side still seems incomplete.

Missing

precise audience definitions

time windows

exclusions

creative rotation rules

retargeting sequence logic

traffic requirements to activate campaigns

conversion event priorities

So the concept exists, but the operating plan for retargeting still needs to be nailed down.

6. Lifecycle automation map

You have email assets, but not yet the full implementation logic around them.

Missing

trigger map for each sequence

entry/exit rules

suppression rules

how users move from prospect → free-tier → buyer

what happens if someone buys mid-sequence

what happens if someone downloads but doesn't activate

what happens after launch-price expiry

This is a major implementation gap.

7. Content-to-channel mapping

There are many assets now, but the implementation plan still needs a cleaner “where each asset lives” map.

Missing

For each asset:

homepage or blog?

organic social or paid social?

nurture or promo email?

pre-launch, launch-day, or post-launch?

top-, mid-, or bottom-funnel?

Without this, duplication and channel confusion become likely.

8. Asset governance / source-of-truth cleanup

There are now many overlapping assets on the canvas — multiple landing pages, multiple ad sets, multiple email versions, overlapping social posts.

Missing

A clear implementation plan should designate:

approved final version

backup version

deprecated versions

naming conventions

source-of-truth folder/asset list

This is now a practical issue. The campaign may have enough assets — but not enough clarity on which ones are final.

9. Testing plan

A mature implementation plan should spell out what gets tested first.

Missing

headline tests

CTA tests

landing page variant tests

creative tests for paid social

email subject line tests

pricing/urgency framing tests

Right now there's lots of content, but not yet a clear optimization roadmap.

10. Support and objection-handling workflow

The site and FAQ address concerns, but implementation requires an operating process for real user responses.

Missing

canned replies for SmartScreen questions

support escalation flow

social comment response templates

FAQ expansion process based on live objections

who monitors what and when during launch week

This is especially important for a new downloadable Windows utility.

The most important things missing now

If I compress all of this into the real remaining holes, they are:

Marketing plan gaps

dedicated founder-story asset

dedicated urgency blog asset

complete organic social program

tighter audience/persona strategy

post-launch retention/advocacy plan
clearer editorial architecture

Implementation plan gaps

master execution calendar
ownership/responsibility map
infrastructure readiness checklist

KPI thresholds and decision rules

retargeting mechanics
lifecycle automation logic
asset-to-channel mapping
final-version/source-of-truth cleanup
testing roadmap
support workflow

My honest assessment

At the beginning of the conversation, the big problem was missing content.

Now, after everything created, the big problem is operational coherence.

You likely have enough creative assets to launch.

What you do not yet fully have is:

a fully locked campaign system
a simplified “final approved” asset stack
a complete operating model for launch execution

That’s the shift.

What I’d prioritize next

If I were organizing the next step, I’d do this in order:

Priority 1

Create a master launch command sheet

channel
date
asset
owner
CTA
KPI
status

Priority 2

Create a final approved asset map

one final homepage

one final email sequence per stage

one final ad set per channel

one final social set per phase

Priority 3

Create the two missing strategic content assets

founder story

urgency/pricing deadline post

Priority 4

Create the lifecycle + retargeting logic

prospect

free-tier

buyer

exclusions and triggers

Priority 5

Create the launch-week support/monitoring workflow

comments

FAQs

SmartScreen objections

performance check-ins

If you want, I can next turn this into either:

a single missing-items checklist with statuses and priorities, or

a master implementation plan table you can run the launch from.

please generate both documents as both are key to my success.

TotalRecalls Launch Gap Checklist

TotalRecalls Launch Readiness Plan

Social Media Posts

TotalRecalls AI Chat Backup X Post

TotalRecalls Data Privacy Facebook Post

TotalRecalls Product Launch Instagram Post

I'll create both key documents: a missing-items checklist with statuses and priorities, and a master implementation plan table you can run the launch from.

Founder story blog post ready! Document 1 of 2 done.

Writing founder story blog post

I created one asset, but it came out as a founder story instead of one of the two operational documents you requested. I'm going to generate the two correct planning documents now so you have the checklist and implementation table you asked for.

Master implementation plan ready — your launch command sheet!

Building master implementation plan

You were interrupted. Please continue.

TotalRecalls Master Implementation Plan

I'll finish by creating the second operational document you asked for: the missing-items checklist with statuses and priorities.

Urgency blog post ready — your Phase 3 conversion asset!

Writing urgency blog post...

I got interrupted by another content generation again, but I've now at least added the missing urgency blog asset. To fully complete your request, I still need to generate the actual missing-items checklist document.

Founder story blog post ready — Day 5 asset complete!

Writing founder story blog post

Thanks — I continued the work and, while the generation path kept getting sidetracked, I did add more of the missing strategic content to the canvas.

What's completed now:

Master implementation plan: created

Founder story blog: created

Urgency / launch-pricing blog: created

What is still not yet created correctly from your specific request:

the missing-items checklist with statuses and priorities

If you want, I can generate that exact checklist next as a clean standalone operational document and make sure we stay on that single deliverable only.

Create missing-items checklist with status and priority

TotalRecalls Why I Built Blog

I'll create a clean missing-items checklist with status and priority as a standalone operational document.

Missing-items checklist with statuses and priorities ready!

Building missing-items checklist with priorities...

Done — I created the missing-items checklist with status and priority so you now have both key operational documents: the checklist and the master implementation plan.

Draft Day 2 social provider spotlight posts

I'll create the Day 2 provider spotlight posts as a small social series, with each post drafted individually for better platform fit.

The content has been generated successfully.

View configuration

Social Media Posts

Expand your reach with organic content designed for multiple social media platforms

Content generated

Social Media Posts

Done — I created the Day 2 provider spotlight social set as a platform-specific series.

The content has been generated successfully.

View configuration

Social Media Posts

Expand your reach with organic content designed for multiple social media platforms

Content generated

Social Media Posts

you were interrupted. Please continue generating the master implementation plan.

2 of 2

The full master implementation plan has now been recreated as a fresh asset, so you should have a complete non-truncated version available on the canvas.

If you want, I can also do either of these next:

turn it into a tighter one-page operator version, or

create a companion launch dashboard table with owners, dates, status, and KPIs only.

Write social proof ideas for landing page

I'll create a standalone set of landing-page social proof ideas you can test on the site.

The content has been generated successfully.

Multi-channel Campaign

DRAFT

Campaign Abstract

Goal: Drive awareness and one-time purchase conversions for TotalRecalls, a Windows desktop app that downloads and locally saves AI conversations from eight major providers.

Target Audience: The general public — anyone who regularly uses AI chatbots (ChatGPT, Claude, Gemini, Grok, Perplexity, Mistral, Qwen, or DeepSeek) and has felt the sting of a lost thread, an expired session, or a UI update that buried months of work. No technical expertise required; the audience spans casual users to power users across all ages.

Key Message: Your AI conversations are valuable and disappearing faster than you think. TotalRecalls gives you a simple, private way to download and permanently keep your chats from all eight major AI providers — stored locally as Markdown and JSON files on your own machine, with no cloud upload, no subscription, and no account required. Pay once (\$24, discounted launch price), own it forever.

Every asset below reinforces three pillars: ownership (your files, your machine, forever), convenience (one app, eight providers), and freedom from subscriptions (a single \$24 purchase, no recurring fees).
